This concise and compact text explains, with great precision and clarity, the basic concepts, theories and practices of international business. The text is so significant because, in today's modern globalized economic environment, international transactions form an integral part of economic activities. Businesses

today are no more confined to national boundaries and have become truly international. Any budding or practising manager, especially of big companies, needs to know the fundamentals of international finance. And this book, written by Professor S. Kevin, who has a rich and long experience in teaching international finance, eminently fulfils this need. The book begins with an explanation of the exchange rate mechanism of foreign currencies, factors influencing exchange rate fluctuations, and the trading mechanism in foreign exchange markets. As currency forwards, futures, options and swaps are the instruments of currency derivatives used as hedging and speculative tools, the book goes on to give a detailed description of the use of currency derivatives for hedging as well as speculative functions. It concludes with an analysis of international financial institutions and their functioning, the participants and instruments of global financial markets where international funds are raised, the many uses of international funds in the form of portfolio investments, and direct investments in host countries. The book is primarily intended as a text for postgraduate students of commerce and management, chartered accountancy (CA) and chartered financial analysis (CFA). Inhaltsangabe:Abstract: The determination to expand abroad especially in the form of foreign direct investment involves very important and complex decisions that have to be based on a detailed analysis and understanding of opportunities as well as threats. The main goal of this thesis is to provide a framework for this decision making in the context of the formulation of long-term competitive strategy. The thesis is divided into two main parts. The first, theoretical one, should outline the approaches to strategic management in consulting companies with special focus on international expansion. It attempts to provide sound background to strategic management in order to answer the following: Which principles can be used to manage a consulting company successfully? How should FDI decisions be involved in the strategic management? Furthermore, a broader theoretical framework for analysing market opportunities will be introduced, which can be applied to any other market a company might decide to enter. An answer to the following question should be found in the text: What analytical proceedings should be carried out before final decision to invest in a country is made? The second, analytical part, will be based largely on the tools described in the first part. The goal is to provide detailed description of the business environment in the Czech Republic in order to give a qualified answer to the following question: Is Czech Republic a strategic opportunity for an IT consulting firm? It has been realised by many firms that the CEE market might have an attractive potential and therefore should be paid at least a minimal attention. Nevertheless, I do not want to overestimate its importance and on the following pages I will try to make a critical assessment whether the Czech Republic should be regarded as a potential opportunity or not. Last but not least, the provided theoretical frameworks and analysis of the Czech IT market can be regarded either as a form of present or future knowledge (i.e. something a company should have in order to sustain or develop its present market position). Short explanations to the limitations set. In this thesis I will not attempt to develop any empirical models, my main interest will lie in model-building at a verbal or a conceptual level, that an IT consulting company may use to analyse the opportunities of international expansion. In the theoretical part only an overview of reasons to expand abroad is [...]
