The international conference series on Visual Information Systems (VISUAL) originates from the idea that the exchange of views, results and experiences would allow researchers and practitioners working in the area of visual information systems to address common problems more effectively. Following the success of previous editions held in Melbourne (1996), San Diego (1997), Amsterdam (1999), Lyon (2000), Taiwan (2002), Miami (2003), San Francisco (2004), Amsterdam (2005), and Shanghai (2007), the aim of the 2008 edition of the International Conference on Visual Information Systems was to provide a fruitful forum of discussion in research fields related to computer vision, databases, human computer interaction, image processing, information visualization, and knowledge and information management. The University of Salerno was honored to celebrate the 10th edition of VISUAL, choosing a prestigious hotel situated on the enchanting Gulf of Salerno, located between the beautiful Coast of Amalfi and the Cilento National Park (both part of UNESCO patrimony). VISUAL 2008 received 58 submissions, which were reviewed by more than 38 international experts in the related research fields from 19 different countries. The resulting technical program continued the tradition of mixing carefully-reviewed research contributions, experience reports and other activities with plenary presentations. Papers collected in this volume include, but are not limited to, topics on data visualization, geovisualization, image and video databases, mobile visual information systems, visual data mining, machine learning and pattern recognition techniques for visual information management, and applications of visual information systems. In particular, three keynote talks were delivered at VISUAL 2008 and six thematic sessions were organized. The first invited talk, A Visual Analytics Approach to Exploration of Large Amounts of Movement Data, was given by Prof. Gennady Andrienko in cooperation with Natalia Andrienko, from the Fraunhofer Institute Intelligent Analysis and Information Systems. Prof. Andrienko faced the issue of enhancing human interpretation of movement data and described the results of their research experience about adequate analysis methods.

Describes economic evaluations for both single processes and complete refineries, and illustrates how to use yield data, properties of products, and operating and capital costs in those evaluations. Two chapters on transportation fuels and environmental concerns have been added to the second edition. Annotation copyrighted by Book News, Inc., Portland, OR.

This title was first published in 2000: The author's masterly exposition of the principles and practice of project management has been pre-eminent in its field for four decades. It was among the very few early books to treat project management holistically, rather than as a collection of separate techniques. It thus explains the entire project management process in great detail, demonstrating techniques ranging from the simplest of charts to sophisticated computer applications. Everything is reinforced throughout with case examples and diagrams. The text has been completely restructured and largely rewritten for this ninth edition, so that the sequence now follows even more closely the life-cycle of a typical project from its earliest definition to final close-out. Case examples and diagrams have all been reviewed, updated, augmented or replaced.

This book is a comprehensive, E-Engineered revision that integrates E-Business and E-Commerce into every chapter and every case making it the most current and up-to-date MIS text in the market.

Managing IT in the E-Business Enterprise, 5E contains 14 chapters (down from 15 chapters and 2 appendixes in 4E) with more case studies and theory throughout, making it most appropriate for upper-level (junior/senior or graduate) business students who are or will become managers, entrepreneurs and business professionals in E-Business enterprises. By including a multitude of real world cases, in-text examples and exercises, organizing chapters into a simple five-area framework, and integrating E-Business concepts into all chapters, the text will help business students learn how to use and manage IT to conduct E-Commerce, improve decision making, and gain competitive advantage in the fast-changing real world of global business.
