Forestry Economics introduces students and practitioners to all aspects of the management and economics of forestry. The book adopts the approach of managerial economics textbooks and applies this to the unique processes and problems faced by managers of forests. While most forestry economics books are written by economists for future economists, what many future forest and natural resource managers need is to understand what economic information is and how to use it to make better business and management decisions. John E. Wagner draws on his twenty years of experience teaching and working in the field of forest resource economics to present students with an accessible understanding of the unique production processes and problems faced by forest and other natural resource managers. There are three unique features of this book: The first is its organization. The material is organized around two common economic models used in forest and natural resources management decision making. The second is the use of case studies from various disciplines: Outdoor and Commercial Recreation, Wood Products Engineering, Forest Products, and Forestry. The purpose of these case studies is to provide students with applications of the concepts being discussed

within the text. The third is revisiting the question of how to use economic information to make better business decisions at the end of each chapter. This ties each chapter to the preceding ones and reinforces the hypothesis that a solid working knowledge of these economic models and the information they contain are necessary for making better business decisions. This textbook is an invaluable source of clear and accessible information on forestry economics and management for not only economics students, but for students of other disciplines and those already working in forestry and natural resources.

The goal of Thomas and Maurice's Managerial Economics is to teach students the economic way of thinking about business decision and strategy. This edition continues to develop critical thinking skills and provides students with a logical way of analysing both the routine decisions of managing the daily operations of a business as well as the longer-run strategic plans that seek to manipulate the actions and reactions of rival firms. Managerial Economics is a self-contained textbook that requires no previous training in economics. While maintaining a rigorous style, this book is designed to be one of the most accessible books in managerial economics from which to teach and learn because of its clarity of presentation and strong end of chapter problems. Rather than parading students quickly through every interesting or new topic in microeconomics and industrial organization, this 11th edition instead carefully develops and applies the most useful concepts for business decision making and strategic planning.

This second edition of a successful textbook builds on the solid grounding of the previous edition and its introduction of the key pillars of game theory into managerial decision-making. Taking an international perspective, the book reflects cutting edge developments in economics such as behavioural economics and auction theory and shows how these can be applied in the workplace.

This fourth edition lays out scenarios that will likely shape firms and industries in the future, and has relevance to CFOs, corporate finance and investment professionals. Business model disruption, data and analytics, intangible assets and dynamic analysis are now key issues within the CFO role. Investment professionals are required to see the larger economic environment in which firms compete, assess a firm's industry and its position within that industry, recognize which investments best serve its broad strategic goals and identify a firm's capabilities and options. A background in the accounting, finance, economic, quantitative and valuation concepts that are relevant to the digital economy, new industries, business models and technologies is essential for finance professionals. This book addresses these issues within the context of the fundamental changes underway in the global economy, and provides applications of the techniques to illustrate the concepts.
