Sometimes there are challenges for lactation therapists that can't be completely resolved by current lactation practices--when the baby has reflux or torticollis, when mother and baby are injured or in pain, when the mother can't relax enough to sleep, when weeks of pumping erode the mother's energy to the point she wants to quit breastfeeding. In Complementary and Alternative Medicine in Breastfeeding Therapy, author Nikki Lee describes mother-baby situations that benefit from complementary and alternative therapy techniques in order to have a thriving baby and a happy mother, with an abundant milk supply and easy breastfeeding. In her experience complementary therapies, when used in conjunction with proven breastfeeding management, do no harm and usually help mother and baby. Therapies covered include: -Creating a healing environment -Skin-to-skin and massage -Acupuncture -Chiropractic -Craniosacral therapy -Remedial co-bathing -Homeopathy This book is not an instruction manual. It is an open door to the world of other ways of healing. Some or all of these therapies may be gentle and helpful additions to your lactation toolbox.

?This book addresses the developing field of Work Disability Prevention. Work disability does not only involve occupational disorders originating from the work or at the workplace, but addresses work absenteeism originating from any disorder or accident. This topic has become of primary importance due to the huge compensation costs and health issues involved. For employers it is a unique burden and in many countries compensation is not even linked to the cause of the disorder. In the past twenty years, studies have accumulated which emphasize the social causes of work disability. Governments and NGOs such as the World Bank, the International Labor Organization, and the Organization for Economic Cooperation and Development have produced alarming reports on the extent of this problem for developed and developing countries. However, no comprehensive book is presently available to help them address this emerging field where new knowledge should induce new ways of management.?

This book is a comprehensive guide to radiopharmaceutical chemistry. The stunning clinical successes of nuclear imaging and targeted radiotherapy have resulted in rapid growth in the field of radiopharmaceutical chemistry, an essential component of nuclear medicine and radiology. However, at this point, interest in the field outpaces the academic and educational infrastructure needed to train radiopharmaceutical chemists. For example, the vast majority of texts that address radiopharmaceutical chemistry do so only peripherally, focusing instead on nuclear chemistry (i.e. nuclear reactions in reactors), heavy element radiochemistry (i.e. the decomposition of radioactive waste), or solely on the clinical applications of radiopharmaceuticals (e.g. the use of PET tracers in oncology). This text fills that gap by focusing on the chemistry of radiopharmaceuticals, with key coverage of how that knowledge translates to the development of diagnostic and therapeutic radiopharmaceuticals for the clinic. The text is divided into three overarching sections: First Principles, Radiochemistry, and Special Topics. The first is a general overview covering fundamental and broad issues like “The Production of Radionuclides” and “Basics of Radiochemistry”. The second section is the main focus of the book. In this section, each chapter’s author will delve much deeper into the subject matter, covering both well established and state-of-the-art techniques in radiopharmaceutical chemistry. This section will be divided according to radionuclide and will include chapters on radiolabeling methods using all of the common nuclides employed in radiopharmaceuticals, including four chapters on the ubiquitously used fluorine-18 and a “Best of the Rest” chapter to cover emerging radionuclides. Finally, the third section of the book is dedicated to special topics with important information for radiochemists, including “Bioconjugation Methods,” “Click Chemistry in Radiochemistry”, and “Radiochemical Instrumentation.” This is an ideal educational guide for nuclear medicine physicians, radiologists, and radiopharmaceutical chemists, as well as residents and trainees in all of these areas.

Help! He’s herding the neighborhood kids!!

Herding breed dogs such as Border Collies, Corgis, and Australian Shepherds have incredibly strong instinctive behaviors to do the work they were bred for—controlling various kinds of livestock. These behaviors manifest themselves in modern herding breed

dogs kept as companions or family pets in a number of ways. These include chasing cars and bicyclists, herding kids, nipping at vulnerable heels, barking incessantly, and acting as the “fun police” in dog parks. All behaviors that are entirely appropriate and necessary when dealing with sheep or cattle, not so great in a suburban neighborhood. Fortunately, these instincts can be redirected in a number of ways that keep these energetic dogs busy and happy as well as out of trouble. That is why so many of these dogs can be taught to excel in agility and obedience trials, love to retrieve, and make great running companions. In her latest book, author Dawn Antoniak-Mitchell offers solutions to solving and preventing problem behaviors associated with herding breeds living in the modern world. And no, even though your Border Collie or Corgi might love it, you don't need to buy a farm!

As the owner of two obsessive but outstanding herding dogs, I found myself nodding along in agreement with this book from start to finish. Dawn offers tips to allow a handler to work with, rather than against a dog's herding instincts and her easy-to-read writing style and the depth of information she shares makes this book a must read for anyone who works or lives with herding dogs.

Nicole Larocco-Skeehan, CPDT-KA and member of the Board of Directors, CCPDT

A super resource that explains how instinctive behaviors impact dogs in their every day activities. I especially like the training tips—very clear and helpful explanations to manage problems often brought out by a variety of herding instincts.

Lynn Leach, owner of Downriver Stock Dog Training and creator of the popular *All Breed Herding* DVD series

A wonderful mix of training information, management suggestions, psychology, and commonsense advice for herding dog owners. Easy to read and filled with gems of information for all dog owners—like eliminating annoying barking! I highly recommend this book for trainers and owners of any breed of dog.

Gail Tamases Fisher, CDBC and author of *The Thinking Dog*

If you have chosen to bring a herding breed in to your life and home this is the book for you! Dawn takes the reader through the history of herding breeds in order to help you understand the why behind some of the obsessive-compulsive behaviors your herding breed may be exhibiting. Better yet, Dawn then offers up specific exercises and training techniques to help herding breed owners become as valuable as livestock in the eyes of their herding dog. You owe it to your herding breed to read this book!

The pain-free approach to resetting the nervous system and releasing muscle spasms From Neuromuscular Therapist Gadi Kaufman comes the long awaited book about how to relieve back pain using the pain-free approach called Strain Counterstrain Technique. In *Back Pain Relief in 90 Seconds*, you will learn important information about lower back pain that you have not been told by the previous practitioners. For example, did you know that the majority of lower back pain does not actually originate in the lower back muscles themselves? In other words, when you feel lower back pain, the true source of that pain can often be traced to muscles and joints in the front of the body. Yes, that's right: those tired and overused muscles in the front of the body can radiate severe pain to the lower back. This lower back pain quickly becomes chronic due to a chain reaction that occurs which limits mobility, twists and torques the spine, rotates the pelvis, and compresses hip sockets on both sides of the body. At the center of this chain reaction is a painful muscle spasm, which means the muscle has essentially shut down and stopped contracting and releasing. If this muscle spasm is left untreated, your lower back pain can persist for years. But now you can do something about it. In *Back Pain Relief in 90 Seconds*, you will learn how to use the passive and pain-free Strain Counterstrain Technique to release persistent muscle spasms and relieve your lower back pain -- in the comfort of your own home, and with no more equipment than your sofa or a chair. This technique is extremely gentle and doesn't require spinal manipulations or uncomfortable maneuvers or deep tissue massage. You can relieve your pain without harsh medications, and without any additional pain during the process. *Back Pain Relief in 90 Seconds* is not another book of exercises and stretching. This technique will manipulate the autonomic nervous system and switch off the muscle spasm (which is being controlled by the nervous system). Relieving this pain is all about the nervous system. If you don't allow the nervous system to reset, then the spasm will not release. Muscles are dependent on the nervous system. As the author Gadi Kaufman famously says: "The nervous system is the boss! The muscles are the employees!" The step-by-step instructions and illustrations in *Back Pain Relief in 90 Seconds* focus on the specific muscles that are known contributors to lower back pain including: Psoas, Iliacus, Rectus Abdominus, Abdominal Obliques, Quadratus Lumborum, Piriformis, and more. With these 10 positional releases, you can begin to live again without lower back pain, which is something everyone deserves.

NATUROPATHIC PHYSICAL MEDICINE provides a philosophical naturopathic perspective, as well as practical clinical applications, for manual and physical approaches to health care. A wide range of bodywork and movement approaches and modalities are evaluated in relation to their ability to be appropriately used in naturopathic treatment and rehabilitation settings. The model of care emphasised in this text recognizes that naturopathically oriented therapeutic interventions usually focus on achieving one or all of the following: enhancement of function so that the person, system or part, can better self-regulate in response to adaptive demands; modification or removal of adaptive load factors; and symptomatic relief without creation of significant additional adaptive changes.
