Mobil pertama bermesin uap dibuat oleh Nicolas-Joseph Cugnot pada tahun 1769. Namun baru pada tahun 1808 François Isaac de Rivaz untuk pertama kalinya membuat mobil dengan mesin pembakaran dalam berbahan bakar hidrogen. Pada tahun 1870, Siegfried Marcus membuat mobil yang digerakkan dengan mesin pembakaran dalam yang memanfaatkan bahan bakar minyak bumi (bensin). Hingga saat ini mobil dengan bahan bakar minyak bumi baik yang berupa bensin maupun minyak solar/diesel masih dominan. Mobil berbahan bakar minyak menimbulkan ketergantungan terhadap minyak bumi yang pada suatu saat akan habis. Disamping itu, pembakaran bahan bakar minyak menyebabkan polusi udara. Bahan bakar yang lebih ramah lingkungan adalah bahan bakar gas. Oleh sebab itu konversi penggunaan bahan bakar minyak menjadi penggunaan bahan bakar gas adalah pilihan yang paling baik. Dengan cara konversi ini mesin mobil konvensional masih tetap dapat digunakan dengan hanya menambahkan alat konverter.

Israel's compliance with International Organization of Securities Commissions' objectives and Principles of Securities Regulation has been assessed. The regulatory regime is well developed and in most respects is comparable with that of major jurisdictions. For the most part, it is compliant with international standards and regulation, and oversight by the Israel Securities Authority is robust and effective. With regard to the regulation of broker dealers, there is a significant gap in the coverage of the regulatory regime.

This book presents selected, peer-reviewed proceedings of the 2nd International Conference on Material, Machines and Methods for Sustainable Development

(MMMS2020), held in the city of Nha Trang, Vietnam, from 12 to 15 November, 2020. The purpose of the conference is to explore and ensure an understanding of the critical aspects contributing to sustainable development, especially materials, machines and methods. The contributions published in this book come from authors representing universities, research institutes and industrial companies, and reflect the results of a very broad spectrum of research, from micro- and nanoscale materials design and processing, to mechanical engineering technology in industry. Many of the contributions selected for these proceedings focus on materials modeling, eco-material processes and mechanical manufacturing. .
