divAn alarmingly high number of American students continue to lack proficiency in reading, math, and science. The various attempts to address this problem have all too often resulted in "silver bullet" solutions such as reducing class size or implementing voucher programs. But as the authors of this critically important book show, improving literacy also requires an understanding of complex and interrelated social issues that shape a child's learning. More than twenty years of research demonstrate that literacy success is determined by a combination of sociocultural forces including parenting, preschool, classroom instruction, and other factors that have a direct impact on a child's development. Here, Frederick J. Morrison, Heather J. Bachman, and Carol McDonald Connor present the most up-to-date research on the diverse factors that relate to a child's literacy development from preschool through early elementary school. Urging greater emphasis on the immediate sources of influence on children, the authors warn against simple, single solutions that ignore other pivotal aspects of the problem. In a concluding chapter, the authors propose seven specific recommendations for improving literacy—recommendations that can make a real difference in American education./DIV

The Routledge Companion to Accounting Education highlights the key drivers of change - whether in the field of practice on the one hand (e.g. increased regulation, globalisation, risk, and complexity), or from developments in the academy on the other (e.g. pressures to embed technology within the classroom, or to meet accreditation criteria) on the other. Thirty chapters, written by leading scholars from around the world, are grouped into seven themed sections which focus on different facets of their respective themes – including student, curriculum, pedagogic, and assessment considerations.

Do statewide assessments really do what they are supposed to do? Through interviews with over three hundred teachers and administrators, Hillocks examines whether state writing tests in Illinois, Kentucky, Oregon, New York, and Texas actually improve students' ability to express their thinking in writing. Ultimately, Hillocks argues that the majority of existing tests actually have a harmful effect on the way students are taught to write. In addition to providing analyses of assessments that do not encourage good writing, The Testing Trap contrasts them to those that do. Concluding with practical procedures for examining and evaluating writing assessments, this book is a provocative and essential read for administrators, teachers, policymakers, parents, and all who care about the education of our children.
