George Brown is an ordinary boy, attending an ordinary school, climbing ordinary trees, and eating ordinary pizza--until he meets a bizarre alien known as "The Protector." Suddenly life for George is anything but ordinary. Now George and the Protector must unravel the secret of a fallen star, find George's missing father, and unlock the mysteries of a small stone which contains fantastic powers.

The need to improve the mathematical proficiency of elementary teachers is well recognized, and it has long been of interest to educators and researchers in the U.S. and many other countries. But the specific proficiencies that elementary teachers need and the process of developing and improving them remain only partially conceptualized and not well validated empirically. To improve this situation, national workshops were organized at Texas A&M University to generate focused discussions about this important topic, with participation of mathematicians, mathematics educators and teachers. Developing Mathematical

Proficiency for Elementary Instruction is a collection of articles that grew out of those exciting cross-disciplinary exchanges. Developing Mathematical Proficiency for Elementary Instruction is organized to probe the specifics of mathematical proficiency that are important to elementary teachers during two separate but inter-connected professional stages: as pre-service teachers in a preparation program, and as in-service teachers teaching mathematics in elementary classrooms. From this rich and inspiring collection, readers may better understand, and possibly rethink, their own practices and research in empowering elementary teachers mathematically and pedagogically, as educators or researchers. .

Being and Teaching Special Needs Gary David Sills Book This book is autobiographical in nature, considerably more informal than a thesis or a research paper. My emotional handicaps struck the week before my senior year of high school. This was at a time when "Special Education" was not established. Mental illness was not a comfortable topic, especially in a Christian home. In this book, my method is to take the reader with me into my struggles, disappointments, and failures in higher education and how I overcame them. As I built skills with troubled teens, I added education from a Christian university that gave me more than adequate tools to teach some of the most difficult to manage

students. Limitations in this kind of writing are describing how I dealt with challenges in my classroom without noting research-based methods or other sources. My memoirs here as a handicapped student improperly diagnosed for many years will be of value to parents wrestling with similar problems. Included in the memoir are many scenarios from my classroom in which I modeled successful responses to situations and explained why; I also offered usable innovations that your teacher will find helpful.

For some students, the mere thought of solving a word problem can transform even the most confident among them into nervous wrecks. In her guidebook, *Math Vitamins*, retired educator Loretta Jean Everhart shares her methods of success that will help any student from Pre-K to fifth grade effectively solve even the most challenging word problems. Everhart taught elementary students for over thirty years and relies on her diverse experience working with students of all levels to offer useful techniques and step-by-step guidance that will lead parents and teachers through several ways to cope with math anxiety, improve math writing and vocabulary, and use cooperative learning to solve word problems. While providing simple strategies like having children work on jigsaw puzzles to learn guess and test methodologies, Everhart also shares an in-depth exploration of Polya's four-step model, which helps children first understand the problem and then develop a plan on how to answer it. For the parent of a home-schooled child or for teacher who is searching for new ideas, this innovative guidebook offers practical tips and suggestions that will help lead struggling students out of the often tricky world of word problems and onto a successful path of future problem solving.

The history of mathematics is filled with major breakthroughs resulting from solutions to recreational problems. Problems of interest to gamblers led to the modern theory of probability, for example, and surreal numbers were inspired by the game of Go. Yet even with such groundbreaking findings and a wealth of popular-level books exploring puzzles and brainteasers, research in recreational mathematics has often been neglected. The Mathematics of Various Entertaining Subjects brings together authors from a variety of specialties to present fascinating problems and solutions in recreational mathematics. Contributors to the book show how sophisticated mathematics can help construct mazes that look like famous people, how the analysis of crossword puzzles has much in common with understanding epidemics, and how the theory of electrical circuits is useful in understanding the classic Towers of Hanoi puzzle. The card game SET is related to the theory of error-correcting codes, and simple tic-tac-toe takes on a new life when played on an affine plane. Inspirations for the book's wealth of

problems include board games, card tricks, fake coins, flexagons, pencil puzzles, poker, and so much more. Looking at a plethora of eclectic games and puzzles, *The Mathematics of Various Entertaining Subjects* is sure to entertain, challenge, and inspire academic mathematicians and avid math enthusiasts alike.
