Limits to Free Trade ranges over a wide diversity of relevant issues ranging from international agreements, to regional trade policies, to import trade barriers, to movements for trade reforms. Informed, informative, and strongly recommended for academic library reference and resource collections, Limits to Free Trade is a model of detailed and articulate scholarship. The Midwest Book Review This book explores the growing list of non-tariff trade barriers raised by the US, EU and Japan and assesses the prospects for significant trade liberalization. The author examines the liability of global free trade through a review of the complaints that these three countries raised about each other over a five-year period. He concludes that free trade may be increasingly hampered as barriers are created more rapidly than can be resolved, and that the prospects for significantly strengthening safeguards are limited. These issues are analyzed in the contexts of the major WTO trade agreements and the political economy of decision-making in the US, EU and Japan. The author concludes that the growing problems are endemic to the system and are not amenable to easy remedy. He tackles topics including international agreements, the trade policy processes in the three regions, issues concerning trade practices, import trade barriers in the EU, and prospects for reform. Scholars, students and practitioners in business economics, international business, and international economics will find much of interest in this book.

In its decades-long effort to assure the safety, efficacy, and security of medicines and other products, the Food and Drug Administration has struggled with issues of funding, proper associations with industry, and the balance between consumer choice and consumer protection. Today, these challenges are compounded by the pressures of globalization, the introduction of novel technologies, and fast-evolving threats to public health. With essays by leading scholars and government and private-industry experts, *FDA in the Twenty-First Century* addresses perennial and new problems and the improvements the agency can make to better serve the public good. The collection features essays on effective regulation in an era of globalization, consumer empowerment, and comparative effectiveness, as well as questions of data transparency, conflicts of interest, industry responsibility, and innovation policy, all with an emphasis on pharmaceuticals. The book also intervenes in the debate over off-label drug marketing and the proper role of the FDA before and after a drug goes on the market. Dealing honestly and thoroughly with the FDA's successes and failures, these essays rethink the structure, function, and future of the agency and the effect policy innovations may have on regulatory institutions abroad.

This is the second book in the series of books that we edit on the Management of Medical Technology (MMT) published by Kluwer Academic Publishers. The first book *Managing Technology in Health Care* offered a broad-brushed view of the topics involved in the new and exciting area of MMT that we have launched. A group of distinguished scholars contributed to the first book. While working on the first book in the series, and on a variety of articles in MMT, we began to realize that there is an urgent need for a comprehensive and highly focused book which will introduce and define the area of MMT. In addition, we had just completed the two studies of MMT in American hospitals, and had a magnificent database fully analyzed. With three months left in the first author's sabbatical, and thanks to the encouragement from our editor at Kluwer, Gary Folven, we took to the task of writing this book. The merging in this book of the description of a new intellectual space, and the write-up of the results from our MMT studies have created a unique blend of very attractive reading material. The reader will find this book to be a fascinating adventure into a newly-created area of intellectual endeavor, coupled with findings about how the health care delivery system manages technology. Regardless of the reader's background, this book will certainly be of interest, as it links the medical and business frameworks.

This study reviews various national and international studies to evaluate the availability of medical technologies in Canada relative to other countries, analyzes data produced by the Canadian Institute for Health Information (CIHI) to measure both the age and sophistication of medical technologies in Canada, and discusses a survey undertaken for this research paper

that measures the stock of cutting-edge medical technologies in Canada's five largest cities. The most prominent theme of "Take Back Our Health Care" is the restoration of a genuine free market in medical care—not the "market" touted by corporations, but a market more akin to the traditional free market and to the systems of Greek and Medieval medical care. The amazing scientific and technological advances in medicine and the effect of those advances changed the role of physicians and increased the costs of care. Increased governmental and corporate control of medicine threatens us all. A genuinely free market is described, as well as the challenges facing those markets. Doctors are in the position of Aesculapius, who, in the cover graphic, represents medicine. His choice is between mercury (merchants) and the three graces (medicine, hygiene, and panacea). Aesculapius treated patients; merchants make deals with clients. The book focuses on the solution.
