Well-known for addressing the use of computers to foster critical-thinking and problem solving, this text was written to teach current and future teachers how to better engage learners more mindfully and meaningfully in the process of learning. Available now in it's Third Edition, it focuses on how to use technology to support meaningful learning through model building, providing powerful strategies for engaging, supporting, and assessing coconceptual change in learners.

This book is designed to provide a practical, criterion-referenced, performance-based, model for general secondary or middle school methods. The text's unique modular format allows students to work through each module at their own pace, building confidence as each skill is mastered. Using current and practical methods of teaching, this latest edition incorporates constructivist-based theory, social-interactive learning strategies, and inquiry learning, which involve students in problem-solving situations.

A world list of books in the English language.

????.

Focusing specifically on teaching in grades 7-12, this comprehensive resource guide/workbook involves readers interactively -- through discussions, exercises, vignettes, and case studies -- with the why, what, how, and how well of a performance-based, competency-based, criterion-referenced approach to teaching. Explores instructional planning, strategy implementation, discipline, legal issues, and both student and teacher evaluation. Reflects the latest developments in cognitive learning theory, the constructivist approach to learning, social/interactive learning, the current school funding environment, and the growing diversity of the student population. Emphasizes an eclectic model of teaching which encourages readers to choose effective approaches from a variety of possible teaching models. Connects strategies rather than teaching them as separate entities. For prospective secondary school teachers (grades 7-12).

This book provides a thorough explanation of MindtoolsM197>alternative ways of using computer applications to engage learners in constructive, higher-order thinking about specific areas of study. It presents a rationale for using these tools, discusses individual Mindtools and their use, and suggests effective ways to teach with each Mindtool. Weaves a critical thinking framework throughout the text. Expands coverage of systems modeling tools with new sections on analysis and reasoning. Adds an entirely new section of the book, which includes chapters on intentional information searching via Internet and visualization tools. For educators and school administrators.
