This text provides an overview of current science teaching practices for the elementary and middle grades. The authors, top scholars in the field of Science Education, believe that all children should develop an in-depth and meaningful understanding of scientific concepts and processes. To achieve this, the text utilizes the Project Based Approach. Project-based science stresses that science teaching should emphasize the active engagement of students in science, rather than teachers telling students information. Each chapter has several Portfolio Activity boxes that provide active learning experiences or reflections for the student. Like the first edition, the text includes numerous strategies in each chapter that help both new and experienced teachers understand how to teach science in an active and engaging manner. The text also shows teachers how to implement the National Science Education Standards (NSES) and constructivist strategies. A NSES marginal feature keys content to the standards. Moreover, this textbook helps teachers learn how to implement all of today's major reforms; not just read about them.

For graduate and undergraduate courses in general K-12 methods. The new edition of this popular text clearly achieves its stated goal: to prepare prospective teachers to meet the challenges of today's changing classrooms by providing effective, practical, research-based practices in an accessible, conversational style. Material is based on a quarter-century of actual, in-classroom research that makes it possible to replace anecdotal suggestions for good teaching with solidly research-grounded strategies empirically related to positive outcomes. The author shows future teachers not only "what" to do to meet today's teaching challenges, but "how" to do it, through the experiences of real teachers in real classrooms.
