substances. Green engineering is the development and commercialization of economically feasible industrial processes that reduce the risk to human health and the environment. This book summarizes a workshop convened by the National Research Council to explore the widespread implementation of green chemistry and chemical engineering concepts into undergraduate and graduate education and how to integrate these concepts into the established and developing curricula. Speakers highlighted the most effective educational practices to date and discussed the most promising educational materials and software tools in green chemistry and engineering. The goal of the workshop was to inform the Chemical Sciences Roundtable, which provides a science-oriented, apolitical forum for leaders in the chemical sciences to discuss chemically related issues affecting government, industry, and universities.

All answers to exercises, quizzes and tests, plus worked out solutions. General Chemistry uses a mastery-learning method. In this method, students build comprehension by adding new concepts while reviewing and rehearsing key material throughout the year. This method is implemented in carefully crafted exercises, quizzes, and the textbook narrative, and it facilitates learning, mastery and retention. Students appreciate the smaller profile and lighter weight of our books. This is possible because of aspects of our Textbook Philosophy. When mastery is the goal, you must cull down the material to an amount that can reasonably be mastered in one year. Related subjects are integrated into the narrative. The history of modern chemistry, mathematics and technical communication is

emphasized throughout. Integration protects a course from seeming compartmentalized from other subjects. That's certainly not how the real world is. Real chemists use math and writing skills every day. Their knowledge about how the scientific enterprise works is greatly enhanced by their knowledge of great scientists who came before. Our approach to implementing a Kingdom Perspective does not entail unnaturally inserting Bible verses or devotional insets. A better approach for Christians is to do science from the faith-informed perspective of disciples of Christ studying God's created order. This is apparent in General Chemistry from the observations about order in the universe, in how nature submits to scientific study and modeling, and in the fitness of creation as a habitat for humanity and animal life.
