Pass with Distinction Secondary 1 Express Mathematics (By Topic) is specially written for students who wish to score excellent grades in their examinations. Based on the latest 2013 syllabus, it contains topical tests that serve to reinforce students understanding of concepts and their ability to apply them to solve mathematical problems and problems in real-world contexts. There are six tests in each topic and the number of marks for each question is included as a guide to the amount of time that a student should spend on each question, approximately 1.5 minutes for each mark. Answers are provided at the end of the book. Step-by-step solutions are included in a separate booklet. We believe that the tests in this book serve as assessments as learning where students think strategically, consciously reflecting on their thinking processes and developing confidence in mathematics. It is hoped that this book will give students an edge in their forthcoming examinations.

The Essential Study Guide Additional Mathematics series comes in three parts: Part 1: Focuses on the building up of the foundation in Algebra Part 2: Understanding the concepts in Geometry and Trigonometry Part 3: Focuses on Calculus (Differentiation and Integration) This series of books follows the latest curriculum. The author hopes to make the learning of Additional Mathematics less daunting and stressful. Students will be able to learn at their own pace and individual learning is made possible with the simple and yet detailed explanations of concepts.

This sixth edition of Additional Mathematics: Pure and Applied, has been completely revised and updated.

New Syllabus Additional Mathematics (NSAM) is a series of textbooks and workbooks designed to prepare students for the Singapore-Cambridge GCE O-level examination in Additional Mathematics. Together with the textbook, the workbook will provide students with ample practice to apply the various skills and concepts learnt to solving problems in both examination and real-life situations. The workbook contains the following features: REVISION NOTES Revision Notes are found at the start of each chapter. They emphasise the important concepts and formulae in the chapter. PRACTICE QUESTIONS Practice Questions provide students with a wide range of questions for further practice. The questions are classified into three levels of difficulty. questions require students to use specific skills and concepts in the chapter directly to solve problems. questions require students to apply their skills and concepts to solve problems. questions require students to apply various skills and concepts, including the use of problem-solving skills, to solve problems. Revision Exercise The Revision Exercise is found after every few chapters to help students to recall and consolidate all the concepts learnt in these chapters. Mid-Year Specimen Papers and End-of-Year Specimen Papers The Mid-Year Specimen Papers and End-of-Year Specimen Papers have been written to follow closely to the format of schools Mid-Year and End-of-Year examinations. It is hoped that when students use this book, to reinforce the concepts that they are weak in, they will eventually gain success in Additional Mathematics.

New Syllabus Additional Mathematics (NSAM) is an MOE-approved textbook specially designed to provide valuable learning experiences to engage the hearts and minds of students sitting for the GCE O-level examination in Additional Mathematics. Included in the textbook are Investigation, Class Discussion, Thinking Time and Alternative Assessment such as Journal Writing to support the teaching and learning of Mathematics. Every chapter begins with a chapter opener which motivates students in learning the topic. Interesting stories about mathematicians, real-life examples and applications are used to arouse students' interest and curiosity so that they can appreciate the beauty of Mathematics in their surroundings and in the sciences. The use of ICT helps students to visualise and manipulate mathematical objects more easily, thus making the learning of Mathematics more interactive. Ready-to-use interactive ICT templates are available at <http://www.shinglee.com.sg/StudentResources/> The chapters in the textbook have been organised into three strands — Algebra, Geometry and Trigonometry and Calculus. The colours purple, green and red at the bottom of each page indicate these.

Mathematics in schools offering the Integrated Programme is usually taught as an integrated subject, so that students will be able to better relate learnt knowledge to new knowledge and transfer conceptual understanding to application, as many mathematical concepts are interconnected. One driving force to write the series is to provide a guidebook especially for students in the Integrated Programme. The other is to share teaching ideas with other Mathematics teachers who love the subject as much as I do. Features: Each topic begins with a recap of key mathematical concepts to help students consolidate learning. Worked examples are included to enhance understanding and application of key concepts, with side notes explaining some of the working.

Practice questions are tiered into three levels of difficulty. Level 1 aims to provide students with the necessary practice; Level 2 to further build the confidence and test students understanding; Level 3 to challenge students with higher order thinking questions. Math Wonderland is one highlight of the book. Activities include extension of the topic, suggested alternative assessment and questions to stretch mathematical thinking. The primary purpose of the Wonderland is to allow students to think deeply about what they have learnt and to appreciate the learning of Mathematics beyond classroom. Step-by-step solutions to all questions are provided as an additional resource to students problem solving process. I hope this book will benefit students studying Integrated Mathematics, as well as those with aptitude for the subject who are preparing for the GCE O Level Mathematics and Additional Mathematics examinations.

This book is written for students who know that they are not doing well in Additional Mathematics and for students who do well but want to do even better. The writer has gone through many Additional Mathematics syllabuses and examination papers. He has taught for many years as a teacher and tutor. He understands the difficulties many students face. That is why the book is a very comprehensive summary of all the topics the student needs to learn and covers almost every area where questions will most likely be asked. Use it as a reference book to supplement textbooks and teachers' teachings, or as a guide for quick revision. Mastering mathematics taught in secondary schools does not require a genius. The most important secret in learning mathematics is in understanding as much as possible what is being taught. Your reasoning mind must be convinced. You must refuse to be force-fed. Concepts, definitions, theorems, procedures and symbols must be understood and not accepted blindly only to be regurgitated in homework and examinations. They must not be scattered like fallen leaves on the soil of a sterile mind. They must be connected to each other like luscious fruits in a bunch of grapes. That is how the materials in this book are organized. Many topics and methods which are not found elsewhere are explained in detail but a lot of what can already be found in every textbook is excluded. Standard forms of formulae are grouped together for easy reference. Study each chapter thoroughly before going to the next, omitting chapters which are not included in your syllabus. This book is a great help to students but it can never replace their relentless efforts. If any student refuses to exert his mind then his failure is expected but it is entirely self-inflicted. Food must be ingested, digested and then absorbed, assimilated and metabolized. Mathematics topics, once learned (ingested) and understood (digested), must be memorized (absorbed), associated and integrated with what one has learned before (assimilated), and put to use by constant practice (metabolized). Procedures, which have already been justified to an inquiring mind, must now become automatic in execution. Mathematics is not a haphazard collection of formulas and theorems put together for the purpose of setting examination questions. It is a supreme achievement of human creativity and ingenuity. It is interesting, challenging and useful. It repays generously every one of its diligent students. Passing examination is the least of its rewards.
