Palliative care has become increasingly important across the spectrum of healthcare, and with it, the need for education and training of a broad range of medical practitioners not previously associated with this field of care. Part of the Integrating Palliative Care series, this volume on surgical palliative care guides readers through the core palliative skills and knowledge needed to deliver high value care for patients with life-limiting, critical, and terminal illness under surgical care. Chapters explore the historical, philosophical, and spiritual principles of surgical palliative care, and follow the progression of the seriously ill surgical patient's journey from the pre-operative encounter, to the invasive procedure, to the post-operative setting, and on to survivorship. An overview of the future of surgical palliative care education and research rounds out the text. Surgical Palliative Care is an ideal resource for surgeons, surgical nurses, intensivists, and other practitioners who wish to learn more about integrating palliative care into the surgical field.

Written by an established, comprehensive, multidisciplinary focused, internationally-recognized team, the sixth edition has been fully revised and brought up to date with the inclusion of recent developments in the speciality, to ensure that it retains its reputation as the definitive reference on palliative care.

Focusing on the most important nursing care plans for practice, this updated edition of Carpenito's practical resource helps students learn how to create nursing care plans, effectively document care, and build clinical reasoning and decision-making skills. To help achieve quality outcomes and prevent adverse events, care plans identify individuals who are at high risk for falls, pressure ulcers, and infection and prepare the individual/family for transition to home or another facility. Evidence-based rationales and guidelines help students understand how research informs practice. Clinical Alerts advise students of serious events that require immediate action and need to be reported in a timely and sometimes urgent fashion. An evidence-based model, STAR (Stop, Think, Act, Review), shows students how to assess a situation prior to intervening and how to evaluate the response after acting. A SBAR (Situation, Background, Assessment, Recommendation) framework facilitates clear, consistent, and succinct communication of pertinent information among health care professionals.

Named a 2013 Doody's Core Title! "The evidence-based protocols are designed as a primary reference and are useful, substantive, and timely...The broader contributions of useful format and succinct review of the evidence make it likely that this text will continue to be the leading resource in nursing education and practice."--The Gerontologist "Now more than ever, nurses are called upon to lead efforts to embed evidence-based practice in daily operations. As the IOM report states, 'nurses have key roles to play as team members and leaders for a reformed and better-integrated, patient-centered health care system.' The process of implementing sweeping change in health care will likely take years; however, nurses must start pragmatically and focus on these critically important protocols that have demonstrated improved outcomes for older adults. Simply stated, 'Pick this book up and use it.'" From the Foreword, Susan L. Carlson, MSN, APRN, ACNS-BC, GNP-BC, FNGNA President, National Gerontological Nursing Association "As a gerontological clinical educator/research nurse, I will often use this as a reference. The format and the content are good, and the explanations of how to best use the evidence simplify the process of sifting through mountains of information to figure the best practice." Score: 97, 5 Stars. --Doody's One of the premier reference books for geriatric nurses in hospital, long-term, and community settings, this 4th edition has been thoroughly updated to provide the most current, evidence-based protocols for care of common clinical conditions and issues in elderly patients. Designed to improve the quality,

outcomes, and cost-effectiveness of health care, these guidelines are the result of collaboration between leading practitioners and educators in geriatric nursing and New York University College of Nursing. Protocols for each clinical condition have been developed by experts in that particular area, and most have been systematically tested by over 300 participating hospitals in "Nurses Improving Care for Health System Elders" (NICHE). Evidence is derived from all levels of care, including community, primary, and long-term care. A systematic method in compliance with the AGREE appraisal process was used to rate the levels of evidence for each protocol. Protocols are organized in a consistent format for ease of use, and each includes an overview, evidence-based assessment and intervention strategies, and an illustrative case study with discussion.

Additionally, each protocol is embedded within chapter text, which provides the context and detailed evidence for the protocol. Each chapter contains resources for further study. Key Features: Updated to provide a wide range of evidence-based geriatric protocols for best practices Contains new chapters on function-focused care, catheter-associated urinary tract infections, mistreatment detection, acute care models, and transitional care Illustrates application of clinical protocols to real-life practice through case studies and discussion Edited by nationally known leaders in geriatric nursing education and practice, who are endorsed by the Hartford Institute for Geriatric Nursing and NICHE Encompasses the contributions of 58 leading practitioners of geriatric care Written for nursing students, nurse leaders, and practitioners at all levels, including those in specialty roles

A multi-authored book, with editors and authors who are leaders in Faith Community Nursing (FCN) that aims to address contemporary issues in faith-based, whole person, community based health offering cost effective, accessible, patient centered care along the patient continuum while challenging contemporary health policy to include more health promotion services. Twenty-five chapters take the reader from a foundational understanding of this historic grass-roots movement to the present day international specialty nursing practice. The book is structured into five sections that describe both the historical advancement of the Faith Community Nursing, its current implications and future challenges, taking into account the perspectives of the pastor, congregation, nurse, health care system and public health national and international organizations. The benefits of this book are that it is intended for a mixed audience including lay, academic, medical professionals or health care executives. By changing the mindset of the reader to see the nurse as more than providing illness care, the faith community as more than a place one goes to on Sunday and health as more than physical, creative alternatives for promoting health emerge through Faith Community Nursing.
