This book is the first ever to offer a contemporary collection of different perspectives on person-centredness in international doctoral nursing research. The research in the book is based on the ideas and values of personhood and person-centeredness, which have been used and can be seen to guide research approaches, inform research designs and theorize research findings. Further, a specific framework for person-centred nursing is embedded throughout the research studies presented in the text. The Person-centred Nursing Framework (PCNF) developed by Brendan McCormack and Tanya McCance in 2010, is recognized as a nursing theory and this book further develops it as a basis for research and for advancing person-centredness in nursing. The framework informs all stages of the research process, from design through to dissemination. The book is structured into a number of highly engaging chapters written by doctoral candidates, and recently graduated candidates. The opening and closing chapters, written by the editors, place the subsequent chapters in a global context of person-centredness and nursing. The potential for person-centred nursing research to be a global movement is recognized and debated. The subsequent chapters lead readers through philosophical ideas, methodologies and methods whilst also offering reflective and honest insights into learning how to become a person-centred researcher. This field is growing and developing but yet there is no specific book available. As a result, researchers spend considerable time and effort translating existing research methodologies into person-

centred perspectives. This book fills this gap and acts as a key resource for future nurse researchers. The text is intended for, and benefits nursing doctoral candidates, masters candidates and academic staff who teach and supervise research candidates; it may also appeal to other graduate learners. The book has international contributions which makes it appealing internationally./div

All of the chapters have been updated with new references and current information including a renewed focus on evidence-based practice and an expansion of research ethics. Proposals are included at the end of the text to help students learn.

This textbook explicitly links understanding of nursing research with evidence-based practice, and focuses on how to read, critique, and utilize research reports. Organized around questions students have when reading reports—how the conclusions were reached, what types of patients the conclusions apply to, how the study was done, and why it was done that way—the text explains the steps of the research process to answer these questions. Chapters include clinical vignettes, highlighted key concepts, and out-of-class exercises. Appendices present a variety of research examples. This edition includes significant new material on evidence-based practice and more distinction between qualitative and quantitative research.
