A comprehensive, practical guide to professional ethics in obstetrics and gynecology for those with or without training in medical ethics.

?In his 35 years of teaching medical students and trainees Professor Gabor Kovacs, International Medical Director of Monash IVF, has devised a system of lectures which cover the entire core curriculum in Obstetrics and Gynaecology. The principle behind these lectures is to help the student understand various aspects of the specialty, rather than simply learning the key topics, and encourages ongoing problem solving as well as a more logical approach. Each of the lectures have been based around highly informative diagrams and tables, and each syndrome follows a set template making each topic very understandable and easy to assimilate. This will be an invaluable text for medical students, nursing and midwifery students, trainees in obstetrics and gynaecology as well as sexual and reproductive health, general and nurse practitioners.

OSCE examinations are compulsory for Medical students and specialist trainees. The student is led through a clinical scenario and then assessed on examination, history taking, investigation, diagnosis and management. Some students are able to practice OSCEs with a teacher acting as the patient, however not all candidates have equal/sufficient access to teachers as such a resource. This often leads to examination candidates not being prepared for the OSCE exam format, performing poorly compared with written paper examinations. The proposed book will cover an approach to passing the OSCE as well as 60 practice questions. Each case will have a sample marking scheme. After the marking

scheme there will be a discussion and key points/pitfalls section

The motive to prepare this volume on antibiotics for the physician caring for women was based upon the editor's perception that the subject matter had never been fully developed for the obstetrician-gynecologist. Most textbooks of infectious disease have a small section devoted to antibiotics, which has little relevance for the physician caring for post-operative or post-partum infections. Basic antibiotic pharmacology is described and there is a reflex prohibition of antibiotics for the pregnant woman. Correctly, the reader assumes that the authors themselves do not care for women with bacterial infections of the pelvis. Recent texts in infectious disease in obstetrics gynecology have been little better. Although the focus has been more clinically oriented, space requirements have too often kept the discussions at a superficial level. A total focus upon antibiotics in this volume eliminates the restraints of space in prior publications. The greatest reward in my task as editor of this volume is related to the quality of the individual authors. They range from former students, to contemporary colleagues, to respected peers in infectious disease. Since the quality of this volume is related to the sum total of the individual chapters, I wish to comment about each of the contributors. Philip Mead from the University of Vermont is an old friend, who brings to the question of prophylactic antibiotics, his wide clinical experience and encyclopedic knowledge.

Further to PasTest's 'Essential MCQs' range, here is a book specific to medical students studying for their Obstetrics and Gynaecology examinations. Three practice papers provide mixed questions and revision checklists that cover all areas.

Undergraduate medical students often struggle with at least some of the specialty elements of their studies. Some face a further challenge with the advent of the Universities Medical Assessment Partnership (UMAP), with a move away from testing specific clinical facts to an assessment focused on preparing to be a foundation doctor and the knowledge such a trainee needs on a daily basis. Neel Sharma has written three self-assessment books - on psychiatry, obstetrics and gynaecology, and paediatrics - designed to help students tackle both the new form of assessment as well as the traditional style of examination. Questions covering all common presentations are included in SBA and EMQ formats with relevant, concise explanations as answers.
