Jenny Silver Willow knows all too well how the lust for gold and money can drive people crazy—literally. Dawson City, Yukon, was rich with that history. The recent opening of the Charlie Avery Gold Mine, brought attention to the historic town and with it a stream of people thinking they too would strike it rich. Dante Carella was new to Dawson City, coming straight from Italy. What she hadn't expected was to have this stranger break her heart and then in the next moment steal it. He certainly hadn't arrived in town like the others in search of gold and gems. Dante had the worst task ever—deliver news of his best friend's death to a woman named Jenny, who lived halfway across the world. He expected tears, anger and questions, but what he hadn't anticipated was to feel the instant connection between Jenny and himself. Dante decides to leave town sooner than later, believing it will be best for

everyone—especially Jenny. Despite Dante's attempts to separate himself from the beautiful woman, a band of professional thieves throw them together where they end up prisoners caught up in a life and death heist escapade. Jenny believes in her animal spirit guides and this time her owl has been revealing more than one important message—but what exactly was that message? She hoped she could figure it out because their lives would depend on it.

Headache is the number one complaint that causes a patient to see a neurologist. Because headaches constitute such a large part of many clinicians

practices, the United Council for Neurologic Subspecialties created an annually-administered headache subspecialty exam in 2006. Headache

Medicine: Questions and Answers is the only question-and-answer book for the new headache subspecialty exam, with more than 500 questions,

answers, explanations, and references to help readers self-assess their knowledge and to prepare for the subspecialty exam, as well as the neurology

Board examination. Headache Medicine: Questions and Answers covers everything from the basics of epidemiology and co-morbidity, to must-know clinical

neurology, to diagnosis and treatment. Board-type review questions are used throughout, each with an

answer, a detailed explanation, and one or more references to help direct more in-depth review as desired. Divided into six key sections for targeted topic review, this is the most comprehensive and effective way to prepare for exams. Key features of Headache Medicine include: Board-type question format used to provide familiarity with question types Answers and explanations, which detail not only why the answer is correct, but also why the distracters are wrong. A series of in-depth, multi-question patient management problems that provide a realistic clinical learning experience References with each question for further investigation as desired Popular for helping readers to organize and evaluate the credibility of surveys, the third edition of How to Conduct Surveys: A Step-by-Step Guide also pays particular attention to four issues in survey research which have become prominent since the publication of the second edition. This version of the text covers how to organize data for analysis, teaching readers to, for example, create a code book. The work also teaches audiences how to create reports and present them using computers. Moreover, this edition includes in depth coverage of human subjects protections-which is an issue about which today's surveyors must know. Finally, the text prepares researchers and students to employ the Internet and e-mail in their work.

When *Crime and Personality* was first published in 1964, J.A.C. Brown, writing in the *New Statesman*, commented: 'There can be no doubt of the importance of Professor Eysenck's book on the nature and treatment of criminal behaviour.' This third edition, originally published in 1977, had been completely revised and brought up to date, and although the major theory linking personality and crime has been retained, many of the details have been changed in conformity with recent research of the time. The book presents a theory concerning the personality of criminals, and offers evidence to show that these personality features characterising criminals are based on genetic foundations. It is

argued that criminality as a whole is not exclusively based on environmental factors as has so often been suggested, but has a strong biological basis. A good deal of evidence is reviewed showing that there are many data supporting this view, from studies of identical and fraternal twins, adopted children, and comparisons between criminals and non-criminals both in the Western world and in Communist countries. Professor Eysenck suggests that important consequences follow from such an attempt to redress the one-sided emphasis on environmental factors which had been so characteristic of the previous fifty years, and some of these consequences are described in detail. He further suggests that only proper understanding of the psychological factors making for antisocial behaviour will help in reversing the increasing burden that criminality places upon society. The book also takes issue with political arguments of the time regarding the origins of criminality, and shows that criminals behind the Iron Curtain show the same personality characteristics as do criminals in Western countries.

In service societies, the tertiary sector has long become the primary sector in terms of GDP and employment. Quality research and testing means

Online Library One Headache After Another Answers

better service, and success in the service industries demands quality. Nonetheless, complaints about insufficient, inconsistent or bad service abound. Quality decides on success and failure. Where so much is at stake, management decisions call for systematic research and consumers look for relevant results that provide guidance in complex markets. Research into quality and customer satisfaction gets to the core of a business. However, many so-called studies hardly meet essential criteria of empirical research and deliver artefacts rather than facts. This book puts an end to common misconceptions of quality studies. *Measuring Service Performance* is an appeal for an approach to quality research that meets quality criteria itself. It is a compelling argument against widespread but rather dubious dealings with measurement, data and statistics. Ralf Lisch calls for a reconsideration of the research process, focussing on content instead of method and adding meaning to results. Because service excellence deserves research excellence. Written in a practical, accessible style, the book offers practitioners as well as market researchers, MBA students and others involved in the service sector a critical analysis and discussion of the essentials of 'Practical Research for Better Quality'. Companion volume to: Mayo Clinic internal medicine board review. 10th ed. c2013.

A Fateful Meeting A year and a half ago, I was sitting

Online Library One Headache After Another Answers

at a conference listening to Ed Noffsinger speak, and suddenly had the most profound “Aha” moment of my professional career. Here was someone presenting a practical and tested solution to some of the most challenging problems currently plaguing the US healthcare system, problems such as poor access to primary and specialty care; the uncontrollable and rising costs of healthcare; our nation’s relatively poor quality outcomes; and finally, the sense of frustration, disempowerment, loneliness, and disenfranchisement that patients and their families too often experience. Dr. Noffsinger’s solution seemed deceptively simple—shared medical appointments (SMAs) that afford the highest quality healthcare to be delivered in the highest quality care experience—a group setting. Experience collected over a decade and involving more than 100,000 patient visits throughout the United States, Canada, and parts of Europe has demonstrated that SMAs, when used in primary care as well as in the medical and surgical subspecialties, lead to increased access to care, enhanced quality of care, and improved patient satisfaction. For physicians, the efficiency gains and team support from their participation in SMAs translate into much needed relief and improved career satisfaction.

This book provides a practical and comprehensive review of pain medicine in a clear and easy to apply question-answer format. Divided by topic, the book includes Q&As on Pain Basics, Psychology, Common Pain Syndromes, Medications, Pain Management in Special Populations and Interventional Pain. It is intended as a guide for residents and fellows and is written in such a manner to provide instantaneous feedback on correct answer choice and explanation for self-evaluation while preparing for written board examinations. Questions and Answers in Pain Medicine: A Guide to Board Exams fulfills the need for a resource that is similar to the Accreditation Council for Graduate Medical Education (ACGME) board examination in the US as well as international equivalents. It utilizes a fully Q&A approach which is how many students prefer to study. Written by a physician who has recently passed the ACGME written board exam and the founder of a pain management fellowship program for nearly 20 years, the authors provide valuable insight for successfully undertaking board examinations in pain medicine. .

This book introduces readers to Web content credibility evaluation and evaluation support. It highlights empirical research and establishes a solid foundation for future research by presenting methods of supporting credibility evaluation of online content, together with publicly available datasets for reproducible experimentation, such as the Web Content Credibility Corpus. The book is divided into six chapters. After a general introduction in Chapter 1, including a brief survey of credibility evaluation in the social sciences, Chapter 2 presents definitions of credibility and related concepts of truth and trust. Next, Chapter 3 details methods, algorithms and

user interfaces for systems supporting Web content credibility evaluation. In turn, Chapter 4 takes a closer look at the credibility of social media, exemplified in sections on Twitter, Q&A systems, and Wikipedia, as well as fake news detection. In closing, Chapter 5 presents mathematical and simulation models of credibility evaluation, before a final round-up of the book is provided in Chapter 6. Overall, the book reviews and synthesizes the current state of the art in Web content credibility evaluation support and fake news detection. It provides researchers in academia and industry with both an incentive and a basis for future research and development of Web content credibility evaluation support services.
