

## Onion Farming Practices In Eastern Region Of Ghana

FAO Plant Production and Protection Papers Greenhouse crop production is an increasing trend throughout the world, with some 405 000 ha of greenhouses spread across Europe. This publication builds on know-how and experience from the South East European region to serve as a guide for trainers and a technical reference for producers and other stakeholders.

This book explores the negotiations at the inter- and intrafaces of knowledge and gender. It analyses the construction of gender and knowledge to reveal how innovations in agriculture either transform existing gender relations or unfold a transcending potential. The case studies on the cultivation of cowpeas, onions and soybeans by Dagombas and Kusasis show that supposedly gender-neutral agricultural innovations become contested fields when men and women are "Trying to Grow". The contextualisation and social connotation of a crop decides over women's participation in rural development. The book throws a fresh light on the management of agricultural knowledge.

The Alliums are some of the most ancient cultivated crops and include onions, garlic, leeks and other related plants. This book provides an up-to-date review of Allium science for postgraduates and researchers. It contains commissioned chapters on topics that have shown major advances particularly in the last ten years such as

molecular biology, floriculture and biofertilizers.

Global warming is an increasing problem, tropical forests are being wiped out and major upper watersheds are being degraded. Using insights provided by environmentalism, ecology and thermo-dynamics, this book – first published in 1989 – outlines an economic approach to the use of natural resources and particularly to the problem of environmental degradation. Edward Barbier reviews and critiques the long past of environmental and resource economics and then goes on to elaborate an economics which allows us to develop alternative strategies for dealing with the problems faced. With examples drawn from Latin America and Indonesia, he not only develops a major theoretical advance but shows how it can be applied. Barbier's work is an important and relevant contribution to the discussion surrounding the economics of environmental sustainability.

Good agricultural practices for greenhouse vegetable production in the South East European countries Principles for sustainable intensification of smallholder farms Food & Agriculture Org.

The book begins by establishing an economic framework upon which to apply the principles of IPM. Then, it looks at the entomological applications of economics, specifically, economic analyses concerning chemical, biological, cultural, and

genetic control tactics as well as host plant resistance and the cost of sampling. Lastly it evaluates whether the control provided by a traditional IPM system is sufficient, or if changes to the system design would yield greater benefits.

Contains administrative report only.

Considers the role of fungi in the tropical ecosystem and their potential as a source of useful, novel compounds.

Bulb physiology; factors affecting the storability of onions; conditioning and storage regimes; requirements for onion stores; methods of storage; planning the store system; local ambient stores; ambient and refrigerated stores utilizing forced aeration; experimental onion stores; storage of onions in controlled atmospheres.

Resulting from research into the needs of teachers arising from the revised syllabuses for GCSE Geography, and focusing on topical issues throughout the UK, this is one of a three-book series of supplementary topic books providing a range of detailed case studies, enquiries and decision-making exercises. The other two pupils' books cover Europe and the world, respectively, and there are teacher resource packs which correspond to all three.

This bulletin describes the wheat varieties suitable for growing in different areas and discusses suitable production methods and practices, such as early preparation of the soil, fertilization, and timely seeding to evade possible damage from the Hessian fly and winterkilling. Diseases and insects and their control also are discussed.

This book has been written to cater to the needs of undergraduate and postgraduate students of Anthropology and Sociology. It takes stock of the work done in the Anthropology of North-
