For the core course in Operations Management. Principles of Operations Management offers students and professors the largest and most diverse problems sets in the industry, as well as providing solved problems and step-by-step worked examples to help students learn outside of the classroom. A more comprehensive version is also available called Operations Management, 10e. Christian A. Ullrich investigates the optimization potential of integrated supply chain scheduling approaches. Considering a company-internal supply chain, the author's first research question is whether the results of integrating machine scheduling and vehicle routing are significantly better than those of classic decomposition approaches which break down the overall problem and solve the subproblems successively. The scope is then broadened to include the machine and transportation scheduling problems of two and more companies at consecutive supply chain stages. The last part of this dissertation addresses supply chain contracting issues.

The field of information systems analysis and design includes numerous evolving modelling methods and notations. Original edition published under the title: Production and operations management.

Modern project management had its genesis in the field of operations research in the late 1940s, but today it is a much more diverse subject. It has evolved and developed a much wider range of methods, techniques, and skills that the project manager can draw upon. Not all these skills are relevant to every project, but an assortment of them will be relevant to most. This book aims to describe for students, researchers and managers the full range of skills that project managers can use to develop their methodologies. The authors group the skills into nine perspectives, representing nine schools of project management research and theory. By attaching a metaphor to each of these perspectives, students, researchers and managers are better able to understand each approach and decide whether it is best suited to the development of a strategy for managing their project. Perspectives on Projects builds upon the various theoretical orientations that the field of project management has developed. Featuring several case studies, drawn from a variety of settings, to illustrate how the different schools can provide different perspectives on projects, this book is an ideal text for anyone involved in project management.

Business Voyages is not a business fairy tale. Much of it really happened. Don't read this book if you are looking for simple answers and magic formulas. Although the book includes some concepts and techniques anyone should know about people and business, it does not promise success. Business Voyages is problem-oriented, presenting some of the problems encountered by the author and others on their business voyages, while explaining tools and processes anyone can use for analyzing and dealing with inevitable problems that will be encountered in any business world. Business Voyages is also opportunity-oriented, showing the reader how one might embark on a business venture at the right time and place and enjoy the winnings of a successful voyage.

In real-life scenarios, service management involves complex decision-making processes usually affected by random or stochastic variables. Under such uncertain conditions, the development and use of robust and flexible strategies, algorithms, and methods can provide the quantitative information necessary to make better business decisions. Decision Making in Service Industries: A Practical Approach explores the challenges that must be faced to provide intelligent strategies for efficient management and decision making that will increase your organization's competitiveness and profitability. The book provides insight and understanding into practical and methodological issues related to decision-making processes under uncertainty in service industries. It examines current and future trends regarding how these decision-making processes can be efficiently performed for better design of service systems by using probabilistic algorithms as well as hybrid and simulation-based approaches.

Traditionally, many quantitative tools have been developed to make decisions in production companies. This book explores how to use these tools for making decisions inside service industries. Thus, the authors tackle strategic, tactical, and operational problems in service companies with the help of suitable quantitative models such as heuristic and metaheuristic algorithms, simulation, or queuing theory. Generally speaking, decision making is a hard task in business fields. Making the issue more

complex, most service companies' problems are related to the uncertainty of the service demand. This book sheds light on these types of decision problems. It provides studies that demonstrate the suitability of quantitative methods to make the right decisions. Consequently, this book presents the business analytics needed to make strategic decisions in service industries.

The 7th edition of Management is once again a resource at the leading edge of thinking and research. This is a book about the business practices of a group of companies who are dedicated to changing the world. These companies participate in the Economy of Communion (EOC) project, which is an initiative of the international and ecumenical Focolare movement. For these companies, changing the world means “humanizing” the economy by consistently privileging relationships over profit-maximizing, and by putting profits in common and using them to address acute social needs and concerns. It also means “humanizing” companies and organizations through business practices that respect the inherent dignity of each person, and that are aimed at breaking down barriers between people in business. The book is the product of a rigorous, robust and multi-year research project involving more than a dozen U.S and Canadian based EOC companies, and should be considered a case study of the EOC rather than a study of any of the individual companies. What, indeed, do we mean by “structures of grace”? First and foremost, the title reflects our conviction that EOC companies are indeed different. And that difference is centered on a conviction of the business as a set of relationships, or more accurately, a community, and the conviction that the purpose of economic activity — the production and distribution of goods and services — is to bring people together, to create community. For us, this is the defining characteristic of the EOC.
