in distributed systems that have networked structures with millions to billions of nodes. The main difference from other works is that the approach is based on holistically and simultaneously analysing these systems using a spatial pattern-matching mode, which produces solutions hundreds of times faster than usual. The latest version of the technology is described, together with implementation details and basic Spatial Grasp Language. In addition, the book highlights numerous solutions, covering graph and network problems, their use in large social, industrial, and business ecosystems, social robotics and driverless transport, and the possibility of extrapolating from known gestalt laws on distributed systems, which could potentially be applied in civil and defence contexts. The book is intended for system scientists, business and industry managers, economists, application programmers, security and defence personnel, as well as university students.

This book puts forward a multidimensional goal-based framework for analysing the effectiveness of the WTO dispute settlement system, while challenging the tendency in current literature to capture the effectiveness of this complex international adjudicatory system through the narrow and fixed concept of compliance. Drawing on the goals - based approach-the book broadly conceptualizes the effectiveness of the WTO dispute settlement system as the

extent to which this system achieves its goals, while using the multiple conflicting and shifting objectives set for the system by WTO Members as the key effectiveness benchmarks. In so doing, it offers a comprehensive empirical account of the manifold and contradictory goals-beyond compliance-entrusted with the WTO dispute settlement system by its mandate providers, and probes the complex trade-offs struck between the multiple goals on the ground. This work addresses cutting-edge legal and institutional questions while implementing a qualitative empirical research design. Drawing on numerous interviews with WTO adjudicators, staff members of the WTO Secretariat, state officials, and trade lawyers, Agon crafts an insider's look into the actual world of WTO adjudication and sets out a framework for a more nuanced and complex analysis of judicial effectiveness at the WTO.

Praise for VALUE MAPS "Equivocator, Explorer, Experimenter, Exploiter, Extender—Chapter 12 might be well served as mandatory reading for all subject matter experts! SPARC is not a valuation, per se, but rather a separate consulting engagement that might interest a client—especially if that client is preparing for a sale or planning an exit strategy. Miller has taken the good ideas from five disciplines and married them with value enhancement, creating what could become a very good 'add-on' consulting engagement. NACVA recommends, and looks forward to, further dialogue related to this new approach.

In 1989, the prominent organisational culture scholar, Stephen Ott, lamented what he saw as the failure of the organisational culture perspective to have the kind of lasting influence — whether empirical, or in terms of its contribution to practice — that had been hoped for. In attempting to explain this state of affairs, Ott observed that: “Some of the most important unanswered questions are methodological, and without methodological advancement, the perspective will not achieve maturity.” The situation today, more than two decades after Ott voiced these concerns, is that academics, researchers, and practitioners alike continue to struggle with the question of how best to decipher and measure an

organisation's culture. "Organisational Culture: Concept, Context and Measurement (In Two Volumes)" aims to encourage an agenda for organisational culture research that gives a renewed emphasis to methodological issues. In pursuit of this aim, consideration is given to both conceptual questions and questions of measurement. In Volume I of the book, the main focus is on the concept of organisational culture. Based on an analysis and critique of existing treatments, as well as a comparison of organisational culture with a number of closely related concepts, consideration is given to how the concept might usefully be elaborated and further refined. In Volume II of the book, the focus is on methodological issues. Drawing on the findings of a series of empirical studies conducted over a number of years, consideration is given to what would be required to develop a measure for organisational culture that is practically useful and also capable of accessing culture at its deepest, and arguably most influential yet most elusive, level. In particular, an approach is advocated that seeks to contextualise organisational culture, in terms of various time and experience domains, and that also promotes the use of attributions analysis as a means whereby to further understand culture at this level. A valuable resource for scholars and practitioners alike, the book provides readers who are interested in understanding the role and influence of culture in organisations with a
