The only resources designed for the Cambridge IGCSE® Chinese as a First Language syllabus (0509). Take an active approach to first language Chinese with activities that reinforce language learning and expand vocabulary and idioms. The coursebook focuses on building students' reading and writing skills through real Mandarin Chinese texts about different topics, such as Chinese philosophers and sport. It also provides opportunities to develop essential life skills including creative thinking, communication and problem solving. At the end of the course, students should be able to critically analyse literary work written in Chinese and demonstrate a strong writing ability. Suggested answers to the coursebook questions are in the teacher's book.

It embodies ecological determinants about agricultural relevance, demographic variables relevant to diffusion and adoption of agricultural innovation, land use pattern, determinants of agricultural innovations, status of irrigation-the base of yield raising technology, use of high yielding variety of seeds, adoption of soil fertility measures, financing system, mechanical technology and agricultural productivity and finally the levels of adoption. Analyses the spatio-temporal, inter-societal and intra-societal variation in the adoption of agricultural development measures has been the thrust objective of this book. Salient Features - Analyses the ecological parameters, cultural background and operational infrastructure of the plateau as the major determinants of agricultural land use and adoption of agricultural development measures. - Evaluates the spatial and temporal variation in the use of agricultural development measures. - Establishes relationship between each of personal-social and economic characteristics of adopters and the extent of adoption of each of selected agricultural innovation. - Determines spatial, inter-societal and intra-societal variation in level of adoption in perspectives of above determinants. - Evaluates the impact of the components of innovations on agricultural productivity. Useful for agricultural geographers, rural development planners and executors, irrigation engineers as well as scholars of rural habitat transformation. Also, this is well befitting the syllabi of universities for post-graduate classes and highly responsive to researchers.

Contains up-to-date information on the full range of international schools, including single-sex, co-educational, day and boarding schools, this guide will assist parents and children in choosing the right international school for them. This textbook offers valuable insights into the nexus between geography, geopolitics, and humanitarian action. It elucidates concepts regarding conflict and power, as well as the role of the state and the international community in mitigating and preventing violence and war. Here the material and non-material, existential or imagined reasons for conflict are deconstructed, ranging from land and resource grabs to Utopian ideals that can degenerate into dystopias, as with Daesh's caliphate in Syria and Iraq. In turn, the issues discussed range from the local to wider national and global levels, as do their resolution mechanisms. Due to insecurities, the impacts of globalization, divisive nationalistic and isolationist reactions emerging in some democracies including the USA, the UK's Brexit stress, and the ominous rise of populist parties across continental Europe (from France and the Netherlands to the Visegrád Group, the Balkans, and Greece), citizen fatigue has become increasingly evident, reflected in ever-growing socio-political malaise and violence. As the impact of any humanitarian disaster is proportional to the level of development of the area affected, concepts and categories of humanitarian action are explored, along with development issues at their core, especially in the Global South. Broadly speaking, humanitarian disasters fall into the categories of natural, human-made, technological, or complex; here, however, the focus is on human-made crises. Attempts at greater regulation, national and international organization and multilateralism to prevent violent conflicts, as well as enhanced responses to humanitarian emergencies, need to be supported now more than ever before. This textbook will appeal to graduate and upper undergraduate students and practitioners in the fields of geography, geopolitics, humanitarian action and geographies of conflict and war. In addition to the main content, it includes exercises, questions and sections for autonomous student learning.

The geo-climatic conditions of South and South-East Asian countries are diverse and vulnerable to multiple natural hazards such as drought. Drought evolves over months or even years, affects a large spatial extent and causes enormous damages. Drought Risk Management in South and South-East Asia is a comprehensive reference on overall perspectives and scenarios on drought risk mitigation and management, based on researches and case studies from South and South-East Asian countries. Drought management is a complex area of work that requires active and continuous participation of the national, provincial and local governments, multiple ministries, and divisions. This book demonstrates the best practices of socio-economic and technological interventions to enhance drought risk management, which will help to develop plans and policies, and their implementation to reduce the impact of droughts. It also offers views of field practitioners on impacts of the interventions practised at the national, sub-national and local levels.

With exceptional content, the 17th edition of *Geography: Realms, Regions, and Concepts*, maintains its position as the market-leading world regional geography title, with a new twist—a new lead author and new contributors who bring fresh and modern perspectives. The new edition specifically brings emphasis to urban geography and spatial techniques through new

content features and Geographic Information Analysis (GIA) Modules. With its refined narrative and dynamic resources, Regions provides a great digital experience, giving students the ability to learn and explore world regional geography both inside and outside of the classroom.

The book presents an overview of the general aspects of trade uncertainty, a central element in the analysis of economic diplomacy, illustrating that some instruments, such as sanctions (both positive and negative), increase trade uncertainty, whilst others - multilateral trade policy, for instance - aim to reduce this uncertainty. Commercial policy and bilateral economic diplomacy are explored, and economic sanctions analysed. An extensive review of the literature and empirical investigations of 161 sanctions and the commercial relationships of 37 countries provide topical and empirical perspectives on how international diplomacy may both be a cost and a benefit of the key drivers of productivity growth. Finally, policy conclusions are drawn, and a future research agenda presented.

Offers a pioneering study of state-making, religion, and development in contemporary Pakistan and its northern frontier.
