The aim of this Handbook is to provide a forum in which some of the generative syntacticians whose work has had an impact on theoretical syntax over the past 20 years are invited to present their views on one or more aspects of current syntactic theory. The following authors have contributed to the volume: Mark Baker, Michael Brody, Jane Grimshaw, James McCloskey, Jean-Yves Pollock, and Luigi Rizzi. Each contribution focuses on one specific aspect of the grammar. As a general theme, the papers are concerned with the question of the composition of the clause, i.e. what kind of components the clause is made up of, and how these components are put together in the clause. The introduction to the volume provides the backdrop for the papers and highlights some of the developments that have occurred in theoretical syntax in the last ten years. Elements of Grammar is destined for an audience of linguists working in the generative framework.

In L'italiano si impara in due students work in pairs. The situations and contexts are typical of Italian society, combining topics of interest to contemporary Italian youth with traditional elements of Italian culture.

Questo e un libro forte, intenso, profondo; e un testo impegnativo, ma non tanto per lo stile di scrittura, che ho cercato di rendere sempre il piA' fluido e scorrevole possibile, quanto piuttosto per i suoi contenuti: ho voluto infatti rivisitare il percorso di ricerca interiore che ho portato avanti per lungo tempo, per arrivare a spiegare, esponendomi in prima persona e senza riserve, chi sono oggi e perche, anche se questo ha talvolta comportato il dover mettere in discussione anche quello che solitamente si tende a dare per scontato, e affrontare determinati aspetti dell'esistenza con cui non e propriamente indolore trovarsi a fare i conti

In this collection of essays, the author addresses the central issues in syntax theory, comparative syntax and the theoretically conscious study of language acquisition. Key topics are explored, including the properties of null elements and the theory of parameters. Some of the essays presented here have been highly influential in their field, while others are published for the first time.

International openness is one of the fundamental characteristics of the DiAP Department of Architecture and Design, which sees its members

active in 57 bilateral collaboration agreements (without counting the Erasmus agreements) with countries in which today there is a demand for architectural design that looks at Italy as a model, not only for studies of historical architecture, but also for contemporary architecture designed in the existing city and for the new building, including complex landscape and environmental systems.

Foreword The modern developments in mathematical biology took place roughly between 1920 and 1940, a period now referred to as the "Golden Age of Theoretical Biology". The eminent Italian mathematician Vito Volterra played a decisive and widely acknowledged role in these developments. Volterra's interest in the application of mathematics to the non physical sciences, and to biology and economics in particular, dates back to the turn of the century and was expressed in his inaugural address at the University of Rome for the academic year 1900/01 (VOLTERRA 1901).

Nevertheless, it was only in the mid-twenties that Volterra entered the field in person, at the instigation of his son in law, Umberto D'Ancona, who had confronted him with the problem of competition among animal species, asking him whether a mathematical treatment was possible. From that time on, until his death in 1940, Volterra produced a huge output of publications on the subject. Volterra's specific project was to transfer the model and the

concepts of classical mechanics to biology, constructing a sort of "rational mechanics" and an "analytic mechanics" of biological associations. The new subject was thus to be equipped with a solid experimental or at least empirical basis, also in this case following the tried and tested example of mathematical physics. Although very few specific features of this reductionist programme have actually survived, Volterra's contribution was decisive, as is now universally acknowledged, in encouraging fresh studies in the field of mathematical biology.

Bringing together papers from various subfields of theoretical linguistics, this volume gives a representative glimpse of current research on form and function in grammar. Its overarching topic is as old as it is hot: the relation between the major clause types as determined in syntax, and their canonical or idiosyncratic roles in discourse as characterized in pragmatic terms. Though none of the papers addresses this topic in its full breadth, they can all be seen to make their specific contributions to it, scrutinizing the pertinent aspects of the grammatical interfaces and elaborating detailed case studies. The first part of this collection comprises three papers (by Asher, Portner, and van Rooy & Franke) devoted to the semantics/pragmatics interface. The second part, with contributions by Rizzi, Saito, and Belletti, deals with the question of how the constitution of sentence types can be related to properties of functional categories in the clausal periphery. The last four papers (Boškovi?, van Riemsdijk,

Bauke & Roeper, Williams) concern the interaction of lexical elements and clausal functional categories, revealing unexpected parallels between clause structure and the internal structure, particularly in lexical categories.
