

## Peter Gray Psychology 6th Edition

"Infants and children are the often-ignored heroes when it comes to understanding human evolution. Evolutionary pressures acted upon the young of our ancestors more powerfully than on adults. Changes over the course of development in our ancestors were primarily responsible for the species and the people we have become. This book takes an evolutionary developmental perspective, emphasizing that developmental plasticity - the ability to change our physical and psychological selves early in life - is the creative force in evolution, with natural selection serving primarily as the Grim Reaper, or a filter, eliminating novel developmental outcomes that did not benefit the survival of those individuals that possessed them, while letting the more successful outcomes through. Over generations as embryos, infants, and children continued to change and to produce slightly different adults, a new species was born - Homo sapiens. This book is about becoming - of becoming human and of becoming mature adults"--

First multi-year cumulation covers six years: 1965-70.

Print+CourseSmart

Ancestral Landscapes in Human Evolution addresses how a shift in the way we parent can influence child outcomes. It examines evolved contexts for mammalian development, optimal and suboptimal contexts for human evolved needs, and the effects on children's development and human wellbeing.

In graphic design, creative thinking skills are undoubtedly important, but sometimes the importance of critical

functions in the formation of the self, the book develops a nuanced and original approach to the interplay between God and the self. It suggests that play is actually an important metaphor in order to develop a dynamic understanding of religion's way of relating God and the Self. This approach challenges understandings of religion focussing only its cognitive claims, as well as those who emphasize doctrinal orthodoxy as the most important element in religion.

The examination of personality and individual differences is a major field of research in the modern discipline of psychology. Concerned with the ways humans develop an organised set of characteristics to shape themselves and the world around them, it is a study of how people come to be 'different' and 'similar' to others, on both an individual and a cultural level. The SAGE Handbook of Personality and Individual Difference is the broadest and most comprehensive overview of the field to date. With outstanding contributions from leading scholars across the world, this is an invaluable resource for researchers and graduate students. Its three volumes cover all of the central concepts, domains and debates of this globally-expanding discipline, including the core theoretical perspectives, research strategies, as well as the origins, applications, and measurement of personality and individual difference.

WONDER HOW YOU TOO CAN BUILD A HIGH-PERFORMANCE TEAM? What makes one team so much more efficient, effective, collaborative and productive than other teams? What differentiates a high-performance team from a mediocre team? Is it because of the team structure, individual team members, or a great leader? Or is there more than meets the eye? In *Hiring for Performance*, Steven Lock introduces the CAAPTM Model that goes beyond looking at the traditional hiring criteria of skills, qualifications and experience. Instead, the model focuses on the Culture, Attitude, Aptitude and Personality attributes of a potential hire. By focusing on these specific character attributes during an interview, the model can help you identify and filter out the right candidates from the masses.

Developed over 10 years and deployed successfully in Singapore, Malaysia, Thailand, Japan and China, the CAAPTM Model will boost your chances of finding the right individuals to build high-performance teams.

A favourite for its exploration of psychology's major theories alongside the evidence that supports and refutes them, with a unique functionalist, evolutionary, neuropsychological and cross-cultural perspective. The sixth edition includes over 530 new research citations and new topics directly relevant to students' lives.

*Skin Color: The Shame of Silence* is a powerful and unapologetic indictment of our so-called post-racial moment and the hypocritical, bad faith, and myth-making discourses that underwrite it. Through a bold theorization of a radical form of Bildung or Paideia that refuses to settle for cognitive

shallowness, epistemological fixity, and moral bankruptcy, Pritcher has crafted a herteroglossic and interdisciplinary text that is written with existential urgency through the recognition that bodies of color continue to suffer with great pain, angst, and alienation under the terror and gravity of white supremacy. Skin Color is nothing short of a clarion call for collective liberation of those whites, “those recovering racists,” who are willing to take risks, to exercise vulnerability, and to be moved and ethically quickened by the ontological presence of those who have historically been, and continue to be, denied their humanity; it is a text that is unafraid to mark blind spots and critique our collective educational failures at challenging and possibly eradicating the color-line that continues to haunt us into the 21st century. —George Yancy, Professor of

Philosophy Duquesne University George Yancy is a professor of philosophy at Duquesne University. He has authored, edited and co-edited 17 books, including Black Bodies, White Gazes, Look, a White! and (co-edited with Janine Jones) Pursuing Trayvon Martin.

Psychology

From Harvard University comes essays sampling topics at the forefront of academia in the twenty-first century. Eminent faculty members invite readers to explore subjects as diverse as religious literacy, cyberspace security, epidemiology, questions in evolution, the dark side of the American Revolution, and the biology of the human mind.

areas, including ethics; children's rights; participatory research methods; three models of human plasticity; breastfeeding and cognitive development; fostering; non-resident or absent fathers; parenting styles in China; effects of domestic violence on children; physical punishment, and child maltreatment; the development and fostering of emotional intelligence; homophobic bullying and cyberbullying; and developing intercultural competence through education. There are entirely new sections on immigration, acculturation, and friendships in multicultural settings; disruptive behaviour and oppositional defiant disorder; sexting; and adolescent bedtimes. The Adolescence chapter has been extensively revised, covering work on the social brain, insights from neuroscience, evolutionary perspectives on risk-taking and peer relationships, romantic development, and use of mobile phones and the internet. This comprehensive study guide helps drive home concepts presented in Peter Gray's Psychology, sixth edition, through active, participatory learning. Each chapter features an overview of the corresponding textbook chapter, a comprehensive series of questions, and two self-tests consisting of multiple-choice and essay questions with answers.

Includes entries for maps and atlases.
