Practical Pharmacognosy Pragati Books Pvt. Ltd. Practical Pharmacognosy CBS Publishers & Distributors Pvt Limited, India Pharmacognosy Nirali Prakashan Project Planning and Control with PERT & CPM Firewall Media Trease and Evans Pharmacognosy Saunders

1 Alkaloids 2 Terpenoids & resins Bibliography

Textbook of Pharmacognosy and Phytochemistry This comprehensive textbook is primarily aimed at the course requirements of the B. Pharm. students. This book is specially designed to impart knowledge alternative systems of medicine as well as modern pharmacognosy. It would also serve as a valuable resource of information to other allied botanical and alternative healthcare science students as well as researchers and industrialists working in the field of herbal technology. Only Textbook Offering... Recent data on trade of Indian medicinal plants (till 2008) Illustrated biosynthetic pathways of metabolites as well as extraction and isolation methodologies of medicinal compounds Bioactivity determination and synthesis of herbal products of human interest Information on Ayurvedic plants and Chinese system of medicine Simple narrative text that will help the students quickly understand important concepts Over 300 illustrations and 120 tables in order to help students memorize and recall vital concepts making this book a student's companion cum teacher A must buy for every student of pharmacognosy!

Introduction. Central Nervous System Stimulants. Antidepressants and Antianxiety Agent (Anxiolytic). Antipsychotic Agents and Hallucinogens. General Anaesthetics. Hypnotics and Sedatives. Skeletal Muscle Relaxants. Tranquilizing Agents. Anticonvulsant Drugs. Analgesics (Narcotics). Anesthetic Analgesics. Nonsteroidal Anti-Inflammatory Agents. Adrenergic Agents. Adrenergic Blocking Agents. Cardiovascular Agents. Histamines & Antihistaminic Agents. antitussives & Expectorants. Coagulants and Anticoagulants

Since the previous edition was published in 2002 there have been notable developments in many areas covering the whole field of pharmacognosy. This edition has been updated to include these changes.

Introduction 2. Synthesis Of Some Official Medicinal Compounds 3. Assay Of Some Official Compounds 4. Monograph Analysis Of The Following Compounds 5.

Identification And Estimation Of Drug Metabolites From Biological Fluids 6.

Determination Of Partition Coefficient Of Compounds For Qsar Analysis 7. I.R. Spectra Of Some Official Medicinal Compounds

PNR Series Practical workbook of Pharmacognosy & Phytochemistry I, meets didactic needs of students of Semester III B.Pharm and can exclusively replace the need of traditional journal writing concept. It includes 12 experiments designed as per syllabus of GTU and PCI which will be helpful to students to study basic details of microscopy, crude drugs along with their chemical tests, and concepts of stomatal number, vein islet number, palisade ratio, ash values, extractive values, swelling index, and moisture content.

Serving as a complete guide to the subject, this volume is made up of four chapters supported by 31 experiments. The manual allows students and faculty to record their observations and results, as well as to draw diagrams.

1 Plant metabolites 2 Pharmacognostic scheme for study of natural drugs 3 Primary metabolites of pharmaceutical and industrial utility 4 Glycosides

1. Introduction to Laboratory 2. Experiments in Plant Physiology 3. Biochemistry 4. Biotechnology 5. Ecology 6. Plant Utilization 7. Project Reports Appendix.

The sub-specialty of pharmacy concerned with the study of the medicinal drugs derived from

plants and other natural sources is called pharmacognosy. It involves the study of the physical, biological and chemical properties of drugs, as well as the search of new drugs from natural sources. The alternative and pseudoscientific practices of using unrefined plant or animal extracts for the purpose of treatment is called phytotherapy. Herbal medicines are used to treat patients suffering from chronic conditions or diseases like asthma, cancer, diabetes, etc. This book traces the progress of pharmacognosy and phytotherapy, and highlights some of their key concepts and applications. It strives to provide a fair idea about these disciplines and to help develop a better understanding of the latest advances within these fields. This book includes contributions of experts, which will provide innovative insights into these fields.

PNR Series Practical workbook of Pharmacognosy & Phytochemistry II, meets didactic needs of students of Semester V B.Pharm and can exclusively replace the need of traditional journal writing concept. It includes experiments designed as per syllabus of GTU and PCI which will be helpful to students to study basic details of microscopy, crude drugs along with their chemical tests, and concepts of stomatal number, vein islet number, palisade ratio, ash values, extractive values, swelling index, and moisture content. It includes requirements, background (theory and principle) and detailed procedure of experiment along with viva voce question answers.

The basic purpose of the book is to present the subject in a simple language and easily understandable style for the benefit of students and other readers. All relevant topics such as hospital pharmacy manufacturing, surgical dressings, computer dispensing, drug interaction, drug dependence, adverse drug reactions, etc. have been covered. The book is characterized by up to date information, comprehensive treatment, and sound observations.

This volume provides data on the significant bio-engineered drugs of natural origin. The focus is on the biology and chemistry of these drugs as they relate to drug production and pharmaceutical use. Also examined, from an historical perspective, is the role of natural products in drug discovery.

A collection of test procedures for assessing the identity, purity, and content of medicinal plant materials, including determination of pesticide residues, arsenic and heavy metals. Intended to assist national laboratories engaged in drug quality control, the manual responds to the growing use of medicinal plants, the special quality problems they pose, and the corresponding need for international guidance on reliable methods for quality control. Recommended procedures - whether involving visual inspection or the use of thin-layer chromatography for the qualitative determination of impurities - should also prove useful to the pharmaceutical industry and pharmacists working with these materials.

The primary causes of wounds requiring skin replacement are severe burns and ulcers. Materials must provide an effective temporary barrier, promote healing and minimise scarring. Massive improvements have been made to skin repair biomaterials in the last ten years with widespread adoption of new developments in the medical sector. This book provides a comprehensive review of the range of biomaterials for treating skin loss. Part one discusses the basics of skin replacement with chapters on such topics as markets and regulation, biomechanics and the biological environment of skin. Part two then reviews epidermal and dermal replacement technology with chapters on such topics as

alternative delivery of keratinocytes, collagen-based and human origin-based dermal replacement, and lyophilized xenogenic products. The final section explores combined dermis and epidermal replacement technologies and provides a round-up of skin replacement principles. With its distinguished editors and international team of contributors, Biomaterials for treating skin loss is a standard reference for those researching skin replacement technologies, particularly those interested in treating burns and ulcers. Comprehensively reviews the range of biomaterials for treating skin loss and skin replacement principles Examines the basis of skin loss from products and markets through to regulation and the biological environment of skin Highlights developments in epidermal and dermal replacement technology covering topics such as collagen-based and human origin-based dermal replacement
