Combining the considerable respective expertise of Triant Flouris and Dennis Lock, this unique book highlights the ways that successful businesses are managed in the aviation industry through the identification and application of proven project management methods. Theoretical concepts are defined, clarified and shown how they can be valuable to business managers and students of the aviation business sector. Aviation Project Management builds on the successful and popular work of Dennis Lock but is considerably enhanced by applications, examples, illustrations and case examples pertaining to projects exclusively from the aviation industry. Theory in the project management field is already well evolved, so the purpose of this book is not to review that theory but rather to demonstrate how the lessons of theory can be of practical use to aviation students and business managers. It provides a practical guide to those interested in how projects are managed and the common mistakes that aviation project managers should avoid.

As the market-leading textbook on the subject, Project Management: The Managerial Process, 4e is distinguished by its balanced treatment of both the technical and behavioral issues in project management as well as by its coverage of a broad range of industries to which project management principles can be applied. It focuses on how project management is integral to the organization as a whole. The 4th edition reflects the latest changes found in the practice. Other texts discuss the topics covered in this text but they do not view oversight as the project manager's operating environment, as does Gray/Larson.

Our motivation in writing this text continues to be to provide a realistic, socio-technical view of project management. In the past, textbooks on project management focused almost exclusively on the tools and processes used to manage projects and not the human dimension
