In this new edition, the text has been revised to reflect new developments in nursing ethics."--BOOK JACKET.

This text fills a void in advanced practice nursing literature by providing a foundation for integrating psychopharmacology, psychotherapy and Complementary and Alternative Medicine (CAM) into advanced practice nursing. The text includes coverage of neurobiology, theory and research evidence related to psychopharmacology, psychotherapy and complementary and alternative medicine interventions. This text addresses the issue of defining and integrating relationship-based approaches with psychopharmacological and CAM approaches by providing beautifully-designed and easy-to-follow decision trees for initiating specific treatment and discussion of specific continuing care issues. This text has a lifespan focus and includes pediatric pointers and aging alerts.

"This book considers the range of skills and roles that nurse's now undertake within specialist CAMHS, it provides a good basic introduction for nurses and clinicians from other disciplines. Discussion around medication management as part of a nurse's extended role is timely and will be of particular use to those considering this option within their practice. The text is easily accessible, utilising case studies to enhance learning. The inclusion of research and audit helps raise the need not only for nurses to be more involved in research but also the need for clinicians to evaluate their practice. I would recommend this text to clinicians new to CAMHS." Sharon Pagett, Senior Lecturer, Mental Health (CAMHS), Department of Nursing, University of Central Lancashire "Nurses have a key role to play within the Child and Adolescent Mental Health Team. Yet there are few textbooks devoted to the specialist and advanced roles which many undertake within this field of practice.

This text will fill the void addressing legal and ethical issues while focusing upon clinical practice and the application of theoretical concepts." Fiona Smith, Adviser in Children's and Young People's Nursing, Royal College of Nursing This book focuses on child and adolescent mental health (CAMH) for nurses training and working in this field. The authors explore the various roles CAMH nurses fulfil and consider how these roles might be undertaken with confidence. Drawing upon both the academic evidence available, and grounded in the reality of clinical practice, the book looks at how to assess the different issues and the various interventions used in practice. The authors consider the effect of child and family development on mental health, as well as broader factors influencing mental health and well-being. Among the core issues considered are: Definitions and consequences of mental health, illness and stigma Child development Legislative frameworks Assessment skills Therapeutic work: individual counselling, cognitive behavioural therapy, family work and medication Clinical governance and supervision Research Chapters include case scenarios, clinical applications and boxes highlighting the key context issues. Nursing in Child and Adolescent Mental Health is relevant to nurses at all levels, but is especially useful to postgraduate nurses and nurses in specialist child and adolescent mental health services (SCAMHS). Other professional staff will also find it useful. Contributors: Laurence Baldwin, P. Mani Das Gupta, Clay Frake, Neil Hemstock, Michael Hodgkinson, Sarah Hogan, Cath Kitchen, Peter Nolan, Theresa Norris, Ged Rogers, Noreen Ryan, Mervyn Townley, Panos Vostanis and Richard Williams.

As an increasing number of children and adolescents with psychiatric symptoms go unrecognized in our current healthcare system, the ability to identify and treat these issues in multiple healthcare settings has become vitally important. With access to primary care providers increasing and a shortage of child psychiatric providers, collaboration between psychiatric, pediatric and family advanced practice nurses is essential to improving care for this vulnerable population. Child and Adolescent Behavioral Health provides a practical reference to aid in this endeavour. Written and reviewed by over 70 nurse experts, it is a must-have reference for all practitioners caring for children and adolescents.

Current public health literature suggests that the mentally ill may represent as much as half of the smokers in America. In Smoking Privileges, Laura D. Hirshbein highlights the complex problem of mentally ill smokers, placing it in the context of changes in psychiatry, in the tobacco and pharmaceutical industries, and in the experience of mental illness over the last century. Hirshbein, a medical historian and clinical psychiatrist, first shows how cigarettes functioned in the old system of psychiatric care, revealing that mental health providers long ago noted the important role of cigarettes within treatment settings and the strong attachment of many mentally ill individuals to their cigarettes. Hirshbein also relates how, as the sale of cigarettes dwindled, the tobacco industry quietly researched alternative markets, including those who smoked for psychological reasons, ultimately discovering connections between mental states and smoking, and the addictive properties of nicotine. However, Smoking Privileges warns that to see smoking among the mentally ill only in terms of addiction misses how this behavior fits into the broader context of their lives. Cigarettes not only helped structure their relationships with other people, but also have been important objects of attachment. Indeed, even after psychiatric hospitals belatedly instituted smoking bans in the late twentieth century, smoking remained an integral part of life for many seriously ill patients, with implications not only for public health but for the ongoing treatment of psychiatric disorders. Making matters worse, well-meaning tobacco-control policies have had the unintended consequence of further stigmatizing the mentally ill. A groundbreaking look at a little-known public health problem, Smoking Privileges illuminates the intersection of smoking and mental illness, and offers a new perspective on public policy regarding cigarettes.
