Over the last fifty years behavioral and medical research has been generously supported by the federal government, private foundations, and other philanthropic organizations contributing to the development of a vibrant public health system both in the United States and worldwide. However, these funds are dwindling and to stay competitive, investigators must understand the funding environment and know how to translate their hypotheses into research grant applications that reviewers evaluate as having scientific merit.

The Second Edition of 'How to Write a Successful Research Grant Application' is the only book of its kind written by federal research investigators which provides technical assistance for researchers applying for biobehavioral and psychosocial research funding and can give them an edge in this competitive environment. The book provides invaluable tips on all aspects of the art of grantsmanship, including: how to determine research opportunities and priorities, how to develop the different elements of an application, how to negotiate the electronic submission and review processes, and how to disseminate the findings. Charts, visual aids, Web links, an extensive real-world example of a research proposal with budget, and a "So You Were Awarded Your Grant—Now What?" chapter show prospective applicants how to: - Formulate a testworthy—and interesting—hypothesis. - Select the appropriate research mechanism. - Avoid common pitfalls in proposal writing. - Develop an adequate control group. - Conduct a rigorous qualitative inquiry. - Develop a budget justification of costs. - Develop a human subjects of animal welfare plan. - Write a data analytic plan. - Design a quality control/assurance program. - Read between the lines of a summary of the review of your application. Although its focus is on Public Health Service funding, 'How to Write a Successful Research Grant' is equally useful for all research proposals, including graduate students preparing a thesis or dissertation proposal. Service providers in community-based organizations and public health agencies will also find this a useful resource in preparing a proposal to compete for grant funds from state and community resources, non-government organizations, and foundations.

which any covered organization's PSM and RMP effort can be brought into proper compliance. The user simply "plugs in" site specific information into the model presented in this guidebook. This guidebook first shows that PSM and RMP are similar and are interrelated in many ways and different in only a few ways. Many of the processes listed in PSM are also listed in RMP; the additional RMP processes are in industry sectors that have a significant accident history. Along with showing the similarities and interrelationships between PSM and RMP, the requirements of RMP that are in addition to those listed in PSM are discussed. This guidebook also discusses the RMP requirement for off-site consequence analysis and the methodology that can be utilized in performing it. If the PSM project team follows this format, it will be able to assemble a viable PSM program in a logical, sequential, and correct manner.

The purpose of the Teacher Follow-up Survey is to provide information about teacher mobility and attrition. It is a one-year follow-up of a sample of 8,400 teachers who were originally selected for the Teacher questionnaire of the Schools and Staffing Survey (SASS). The study asked three questions: (1) Who is most likely to leave; (2) why do they move or leave; and (3) where are they likely to go? Data in this report link responses from the 2000-01 school year to characteristics of those same teachers who participated in SASS during the 1999-2000 school year. Within this report, there are some data that are drawn directly from the 1999-2000 SASS. Results reveal that teachers with less than 10 years of experience, teachers under the age of 30, and teachers from private schools were more likely to leave than others in the sample. Among the reasons that public school teachers gave for moving to a new school were an opportunity for a better teaching assignment, dissatisfaction with support from administrators, and dissatisfaction with workplace conditions. Teachers who left tended to go from private to public schools, and private school teachers were more likely to move to occupations outside of education rather than were public school teachers. Appended are: (1) Standard Error Tables; (2) Technical Notes; and (3) Description of Variables. (Contains 14 tables.).
