This important and original book places the case study in international business research in its historical context, critically evaluates current case study practices in the field and proposes a more pluralistic future for case research within international business and international management research. While the case study is the most popular qualitative research strategy in the field, only a narrow selection of possible approaches is currently used. IB and IM researchers typically rely on a case study approach that could be characterized as 'qualitative positivism'. The editors and contributors look beyond this disciplinary convention and encourage greater pluralism in IB and IM case research. Their key argument is that increased awareness of prevailing disciplinary conventions - and their limitations - increases the potential for methodological innovation and versatility in case research. The contributions provide critical, novel and innovative perspectives on the case study in IB and IM research. The book offers inspiration to case authors and an authoritative methodological reference for those publishing and reviewing case research. It will also be highly regarded by postgraduate and doctoral students in IB and IM as well as both qualitative and quantitative researchers in the field.

Are you about to begin your dissertation or a research project, but don't know what topic to choose? Are you unsure of what research methods to use and how they should be applied to your project? Are you worried about how to write up your research project? Then this is the book for you! A balanced coverage of qualitative and quantitative methods means that no matter what approach you choose to use for your project, there are examples and case studies to help guide you through the process. Student Research boxes provide an insight into situations and research decisions that students have encountered in real life projects. They contain hints, tips and sometimes questions to help you think through your own project. A Running Case Study charts the progression of two student research projects - one qualitative and one quantitative - and shows how the content of each chapter can be used to develop their projects. Thought provoking questions are included in order to help you consider the issues and decisions involved, which you can then apply to your own project. Deeper Insight boxes delve further into particular research issues, offering you a detailed description to increase your understanding of these areas, whilst Real Life examples put research methods into context, by showing you how they have been applied in real world situations. The Online Learning Centre contains a vast amount of extra resources to help you create a superior project: Six statistical chapters are available to help you prepare, test and analyse your hypotheses and data. Extra cases, appendices and dataset exercises help you to take your study further.
