"Global gaming networks are heterogenous collectives of localized practices, not unified commercial products. Shifting the analysis of digital games to local specificities that build and perform the global and general, Gaming Rhythms employs ethnographic work conducted in Venezuela and Australia to account for the material experiences of actual game players. This book explores the materiality of digital play across diverse locations and argues that the dynamic relation between the everyday life of the player and the experience of digital game play can only be understood by examining play-practices in their specific situations." -- Website.

A game designer considers the experience of play, why games have rules, and the relationship of play and narrative. The impulse toward play is very ancient, not only pre-cultural but pre-human; zoologists have identified play behaviors in turtles and in chimpanzees. Games have existed since antiquity; 5,000-year-old board games have been recovered from Egyptian tombs. And yet we still lack a critical language for thinking about play. Game designers are better at answering small questions ("Why is this battle boring?") than big ones ("What does this game mean?"). In this book, the game designer Brian Upton analyzes the

experience of play--how playful activities unfold from moment to moment and how the rules we adopt constrain that unfolding. Drawing on games that range from Monopoly to Dungeons & Dragons to Guitar Hero, Upton develops a framework for understanding play, introducing a set of critical tools that can help us analyze games and game designs and identify ways in which they succeed or fail.
