The book is about showing different ways of doing ethics, highlighting a kind of

methodological pluralism. This book attempts to relate the difference in methodology and perspective to difference in identity, focal point of analysis, or projects of persuasion. Difference matters ultimately because pluralism matters. This book is a tutorial in ethical analysis and reasoning. Seminararians and graduate students will be brought into the finer points of ethical analysis, of mastering the ins and outs of ethical methodology, by immersing themselves in critical social-ethical analyses of prominent scholars in the American academy. Students will be guided toward how to develop their own voice in social issues, hone their capability in social analysis, and critically engage the social sciences, history, philosophy, and literature as they embark on ethical analyses. There is no single way of teaching the methodology of social ethics and no single theory of ethics that satisfies all; therefore ethics and its methodology are better understood by enabling students to view the field through multiple "windows." Simultaneously they will learn to view social reality from different perspectives. The seven chapters of this book explore the different ways American ethicists have interrogated their nation's moral systems or crafted methods for understanding them.

software, nor business process reengineering. Using primarily HP products for the solution examples, the chapters guide the reader through the foundation of the systems from an IT perspective, reviews its business application and architecture and introduces the server systems, then describes data storage, high availability and recovery solutions, client PCs with front-end user interfaces, output management and printing solutions, network infrastructure and requirements, cabling designs, LANs and WANs, and connecting mySAP.com to the Internet. Both authors are members of the HP-SAP International Competence Center. Annotation copyrighted by Book News, Inc., Portland, OR
