Fostered and adopted children can present major challenges resulting from unresolved attachment issues and early traumatic experiences. In this much-needed book, the contributors provide a variety of complementary perspectives on the needs of these children and their families, focusing on ways of integrating attachment theory and developmental psychology into effective practice. Examining multiple aspects of work

with children who are unable to live with their birth families, the book includes contributions on the assessment, preparation and support needs of children and families, attachment and the neurobiological effects of trauma, effective management of contact with birth families and developmental challenges in school settings. The use of creative arts therapies, alongside developmental reparenting strategies as part of a long-term attachment therapy 'package', are explored in some detail. A fictionalised family, used as a working example throughout Part 2, brings practical interventions to life: illustrating the Family Futures' inclusive approach, where adoptive and foster parents become pivotal members of the therapeutic team. In addition, contributions from real-life user families illustrate some of the challenges they face and demonstrate how the developmental attachment-based approach has worked for them. Bringing together a rich and innovative selection of ideas for adoption and fostering practice across the disciplines, this book will be a valuable resource for all involved in supporting substitute families.

In the beginning I never intended to write a book. I just started writing poetry in my early teens, and now after fifteen years of writing I decided to put it all together in a book. This is me, my life, my love, my failure, my faith, to share with all of you. My love for poetry is strong but my love for God is stronger, but I will remind all my readers that poetry is sometimes raw and very blunt, but can also touch the deepest depths of our souls. I hope my book finds that part in you.

While a war rages in space, a revolutionary group of humans, shapeshifters, and telepaths gather to prove their races can live together in peace. They believe in peace enough to erase their memories and begin a primitive city on a secluded planet, Vastus. Generations later, conflicts on Vastus force people to flee their city. Meanwhile, a few Peace Bringers arrive on a broken-down space station to observe the inhabitants on Vastus. What they see is anything but encouraging, and they must deal with problems of their own. Vastus Station is falling apart, and the relationships between the occupants are equally precarious.

Siena can heal wounds with a touch of her hands. A captive since birth, she is used as a tool of war by a Plainsmen tribe. A chance escape into the forest proves successful... and deadly. Rescued by the Forestfolk—a group of people she always thought were nothing more than bedtime stories—Siena remains on edge. Trust does not come easily when persecution is all she's ever known. Keeping her abilities a secret seems like the right thing to do, until a tragic accident renders two Forestfolk spiraling toward death. If she chooses to reveal her abilities, she risks being subjugated again. Treated as no longer human. Maybe even sent back to the Plainsmen. But keeping her talent to herself means ignoring the injured around her, even allowing them to die. The choice seems obvious to Siena, but living with the repercussions of that choice is another matter altogether. A journey of self-discovery, a bit of adventure, and a splash of romance.

In 1988, a side-scan sonar reading of Rock Lake, Wisconsin's underwater structures was recorded by divers, under the direction of University of Wisconsin Professor of Civil Engineering Dr. James Scherz. After viewing the image, the author worked with Sac and Fox Nation elders in Wisconsin and Stroud, Oklahoma, to obtain the translations of the Medewigan, or Medicine Lodge. Similar legends are described in Ashinaubig, Menominee, Ojibway, and Winnebago (Ho Chunk) traditions and in an 1890 Ojibway text. However, the oldest written record of the Sauk Tribe is found in an 1100 B.C. Chinese Imperial record that describes the Emperor's notation of similarity in the warriors' archery skills and red-plumed Mohawks, which recalled their own Red Phoenix creation legends.

This edited volume presents the first comprehensive analysis of recall processes which have spread globally since the end of the Cold War, and which are now re-configuring the political dynamics of electoral democracy. Drawing on the expertise of country experts, the book provides a coherent and theoretically informed framework for mapping and

evaluating this fast-evolving phenomenon. While the existing literature on the subject has so far focused on isolated single-country studies, the collection brings recall experiments to centre stage as it relates them to current crises in the traditional variants of representative democracy. It explains why the spread of recall innovations is set to continue, and to pass a threshold from inattention to urgent engagement. The authors further provide original insights into the rationale for recall, as well as guidance on minimising the accompanying risks.

Commemorating the fiftieth anniversary of the National Historic Preservation Act, a critique of the preservation

movement—and a bold vision for its future Every day, millions of people enter old buildings, pass monuments, and gaze at landscapes unaware that these acts are possible only thanks to the preservation movement. As we approach the October 2016 anniversary of the United States National Historic Preservation Act, historian Max Page offers a thoughtful assessment of the movement's past and charts a path toward a more progressive future. Page argues that if preservation is to play a central role in building more-just communities, it must transform itself to stand against gentrification, work more closely with the environmental sustainability movement, and challenge societies to confront their pasts. Touching on the history of the preservation movement in the United States and ranging the world, Page searches for inspiration on how to rejuvenate historic preservation for the next fifty years. This illuminating work will be widely read by urban planners, historians, and anyone with a stake in the past.

In this major new study in the sociology of scientific knowledge, social theorist Mohammad H. Tamdgidi reports having unriddled the so-called 'quantum enigma.' This book opens the lid of the Schrödinger's Cat box of the 'quantum enigma' after decades and finds something both odd and familiar: Not only the cat is both alive and dead, it has morphed

into an elephant in the room in whose interpretation Einstein, Bohr, Bohm, and others were each both right and wrong because the enigma has acquired both localized and spread-out features whose unriddling requires both physics and sociology amid both transdisciplinary and transcultural contexts. The book offers, in a transdisciplinary and transcultural sociology of self-knowledge framework, a relativistic interpretation to advance a liberating quantum sociology. Deeper methodological grounding to further advance the sociological imagination requires investigating whether and how relativistic and quantum scientific revolutions can induce a liberating reinvention of sociology in favor of creative research and a just global society. This, however, necessarily leads us to confront an elephant in the room, the 'quantum enigma.' In *Unriddling the Quantum Enigma*, the first volume of the series commonly titled *Liberating Sociology: From Newtonian toward Quantum Imaginations*, sociologist Mohammad H. Tamdgidi argues that unriddling the 'quantum enigma' depends on whether and how we succeed in dehabituating ourselves in favor of unified relativistic and quantum visions from the historically and ideologically inherited, classical Newtonian modes of imagining reality that have subconsciously persisted in the ways we have gone about posing and interpreting (or not) the enigma itself for more than a century. Once this veil is lifted and the enigma unriddled, he argues, it becomes possible to reinterpret the relativistic and quantum ways of imagining reality (including social reality) in terms of a unified, nonreductive, creative dialectic of part and whole that fosters quantum sociological imaginations, methods, theories, and practices favoring liberating and just social outcomes. The essays in this volume develop a set of relativistic interpretive solutions to the quantum enigma. Following a survey of relevant studies, and an introduction to the transdisciplinary and transcultural sociology of self-knowledge framing the study, overviews of Newtonianism, relativity and quantum scientific revolutions, the quantum enigma, and its main interpretations to date are offered. They are followed by a study of the notion of the "wave-particle duality of light" and the various experiments associated with the quantum enigma in order to arrive at a relativistic interpretation of the enigma, one that is shown to be capable of critically cohering other offered interpretations. The book concludes with a heuristic presentation of the ontology, epistemology, and methodology of what Tamdgidi calls the creative dialectics of reality. The volume essays involve critical, comparative/integrative reflections on the relevant works of founding and contemporary scientists and scholars in the field. This study is the first in the monograph series "Tayyebah Series in East-West Research and Translation" of *Human Architecture: Journal of the Sociology of Self-Knowledge* (XIII, 2020), published by OKCIR: Omar Khayyam Center for Integrative Research in Utopia, Mysticism, and Science (Utopystics). OKCIR is dedicated to exploring, in a simultaneously world-historical and self-reflective framework, the human search for a just global society. It aims to develop new conceptual (methodological, theoretical, historical), practical, pedagogical, inspirational and disseminative structures of knowledge whereby the individual can radically

understand and determine how world-history and her/his selves constitute one another. Reviews “Mohammad H. Tamdgidi’s *Liberating Sociology: From Newtonian Toward Quantum Imaginations*, Volume 1, *Unriddling the Quantum Enigma* hits the proverbial nail on the head of an ongoing problem not only in sociology but also much social science—namely, many practitioners’ allegiance, consciously or otherwise, to persisting conceptions of ‘science’ that get in the way of scientific and other forms of theoretical advancement. Newtonianism has achieved the status of an idol and its methodology a fetish, the consequence of which is an ongoing failure to think through important problems of uncertainty, indeterminacy, multivariation, multidisciplinary, and false dilemmas of individual agency versus structure, among many others. Tamdgidi has done great service to social thought by bringing to the fore this problem of disciplinary decadence and offering, in effect, a call for its teleological suspension—thinking beyond disciplinarity—through drawing upon and communicating with the resources of quantum theory not as a fetish but instead as an opening for other possibilities of social, including human, understanding. The implications are far-reaching as they offer, as the main title attests, liberating sociology from persistent epistemic shackles and thus many disciplines and fields connected to things ‘social.’ This is exciting work. A triumph! The reader is left with enthusiasm for the second volume and theorists of many kinds with proverbial work to be done.” — Professor Lewis R. Gordon, Honorary President of the Global Center for Advanced Studies and author of *Disciplinary Decadence: Living Thought in Trying Times* (Routledge/Paradigm, 2006), and *Freedom, Justice, and Decolonization* (Routledge, forthcoming 2020) "Social sciences are still using metatheoretical models of science based on 19th century newtonian concepts of "time and space". Mohammad H. Tamdgidi has produced a 'tour de force' in social theory leaving behind the old newtonian worldview that still informs the social sciences towards a 21st century non-dualistic, non-reductionist, transcultural, transdisciplinary, post-Einsteinian quantum concept of TimeSpace. Tamdgidi goes beyond previous efforts done by titans of social theory such as Immanuel Wallerstein and Kyriakos Kontopoulos. This book is a quantum leap in the social sciences at large. Tamdgidi decolonizes the social sciences away from its Eurocentric colonial foundations bringing it closer not only to contemporary natural sciences but also to its convergence with the old Eastern philosophical and mystical worldviews. This book is a masterpiece in social theory for a 21st century decolonial social science. A must read!" — Professor Ramon Grosfoguel, University of California at Berkeley???????? "Tamdgidi’s *Liberating Sociology* succeeds in adding physical structures to the breadth of the world-changing vision of C. Wright Mills, the man who mentored me at Columbia. Relativity theory and quantum mechanics can help us to understand the human universe no less than the physical universe. Just as my *Creating Life Before Death* challenges bureaucracy’s conformist orientation, so does *Liberating Sociology* “liberate the infinite possibilities inherent in us.” Given our isolation in the Coronavirus era, we have time to follow Tamdgidi in his journey into the depth of inner

space, where few men have gone before. It is there that we can gain emotional strength, just as Churchill, Roosevelt and Mandela empowered themselves. That personal development was needed to address not only their own personal problems, but also the mammoth problems of their societies. We must learn to do the same." — Bernard Phillips, Emeritus Sociology Professor, Boston University
