What are word classes? How can we recognize them? What role do they play in regards to punctuation? Grammar in Theory and in Practice was written for those who want straight answers, in plain English, to these crucial, yet rarely asked, questions. This essential guide empowers students to identify parts of speech rapidly, to employ punctuation marks confidently, and to examine syntax precisely, in four popular GCSE texts: Lord of the Flies, Animal Farm, Frankenstein, and 1984. Grammatical categories are neatly defined in the glossary, and each chapter is packed with practical and demanding exercises, testing your knowledge of nouns, verbs, adjectives, adverbs, conjunctions, and prepositions. Topics range from the relatively simple, such as common pronoun errors or subject-verb agreement problems, to the somewhat complex, such as appositives, participles, or rhetorical devices. At the end of the course, there is a large punctuation section that revises the usage of commas, colons, semicolons, hyphens, and apostrophes.

One of the twelve Minor Prophets, Micah unwaveringly spoke God's message to Israel--a message filled with judgment but also laced with the promise of redemption. Micah combined poetic complexity and literary

sophistication to compel his audience to respond. And now, through an exacting linguistic and literary analysis of the biblical text, coauthors Francis I. Andersen and David Noel Freedman explain what Micah meant to his contemporaries, as well as what his message means to readers today. What sets Micah apart is the attention it pays to the details of the prophet's original text. The commentary is descriptive rather than speculative, philological rather than theological. With unusual care, the authors--two of the world's leading Bible scholars--examine the features of Micah's biblical Hebrew and prophetic discourse. They discover the use of a special kind of language, which, in its poetic composition, differs significantly from the language of classical Hebrew prose. At the zenith of their careers, masters of all relevant disciplines, Andersen and Freedman are the perfect duo to unlock the words of this challenging prophet.

This volume is about 'dislocation' – the removal of phrases from their canonical positions in a sentence to its left or right edge. Dislocation encompasses a wide range of linguistic phenomena, related to nominal and adverbial expressions and to the information structuring notions of topic and focus; and takes intriguingly different forms across languages. This book reveals some of the empirical richness of dislocation and some key puzzles related to its syntactic, semantic, and discourse analysis. NooJ is both a corpus processing tool and a linguistic development environment: it allows linguists to formalize several levels of linguistic phenomena: orthography and spelling, lexicons for simple words, multiword units and

frozen expressions, inflectional, derivational and productive morphology, local, structural syntax and transformational syntax. For each of these levels, NooJ provides linguists with one or more formal tools specifically designed to facilitate the description of each phenomenon, as well as parsing tools designed to be as computationally efficient as possible. This approach distinguishes NooJ from most computational linguistic tools, which provide a single formalism that should describe everything. As a corpus processing tool, NooJ allows users to apply sophisticated linguistic queries to large corpora in order to build indices and concordances, annotate texts automatically, perform statistical analyses, etc. NooJ is freely available and linguistic modules can already be downloaded for Acadian, Arabic, Armenian, Bulgarian, Catalan, Chinese, Croatian, French, English, German, Hebrew, Greek, Hungarian, Italian, Polish, Portuguese, Spanish and Turkish. The present volume contains papers from the 2008 International NooJ conference which was held 8–10 June 2008 in Budapest. While the focus of the Budapest conference was on making NooJ compatible with other applications, the papers vary with respect to whether they regard Natural Language Processing (NLP) as a research goal or as a tool. However, they all present a slightly different problem either in the field of NLP, or in one that can be solved using NLP, or present a new development in the tool itself. The range of problems dealt with in the volume is quite varied, which will hopefully enable the readers to find contributions that are relevant to their field of interest.

As with almost every other part of our daily lives, information technology is now indispensable in the legal sphere. The variety of applications has grown, keeping pace with developments in the wider field of artificial intelligence: logic and argument have been joined by statistical methods and data, and knowledge engineering has been enriched by machine learning. This book presents the papers delivered at the 29th International Conference on Legal Knowledge and Information Systems – JURIX 2016, held in Nice, France, in December 2016. From the 56 submissions received for the conference, 11 were selected for publication as full papers, 10 as short papers, and 10 as posters, which are included in the proceedings for the first time. The papers address a wide range of topics at the interface of Artificial Intelligence (AI) and Law, such as argumentation, norms and evidence, network science, information retrieval, and natural language processing. Many of the theories and technologies explored in the papers are drawn from real-life materials, including cases brought before the European Court of Human Rights, Dutch and Greek legal texts, and international investment agreements and contracts. Reflecting the many facets and the interdisciplinary character of AI and Law, the book will be of interest to all those whose work involves them in these fields.
