Risk assessment has become the backbone of Health and Safety management in the UK and elsewhere. Employers have a legal duty to prove that risk assessments have been carried out and precautions have been implemented as far as (reasonably) practicable. Mike Bateman demystifies the risk assessment process and how it relates to UK legislation. He covers both the general techniques and the assessment of specific risks, such as hazardous substances (COSHH), noise, manual handling, DSE workstations, PPE, fire, asbestos and work at height. The book is designed to be user-friendly rather than overly legalistic or academic and tells the reader how to go about risk assessment, not just what the legislation requires. It contains numerous checklists, forms and worked examples for a variety of hazards and industries. This
