

Routine Road Maintenance Manual Nra

Explains best-practices based on a number of successful international case studies. Changing River Channels is intended for all those with an interest in the dynamics of river channels and their management. Contributions are drawn from both the academic and river management communities and these provide perspectives based upon British, European and North American examples. The chapters are organised into four sections which consider the magnitude and dimensions of river channel adjustments over different timescales; the processes which influence those adjustments, focussing particularly upon the roles of sediment transport and storage, and of vegetation; the information sources that are available for assessing the degree and nature of change; and finally, perspectives on the management of changing river channels. This volume is one of two companion edited books to mark the contributions of Professors K.J. Gregory and D. E. Walling to research on drainage basin form and processes. Each presents a balanced range of contributions written by research colleagues and students.

The Gambia Technical Assistance Report-Public Investment Management Assessment International Monetary Fund This Technical Assistance Report on The Gambia highlights that the government has highlighted infrastructure development as a key element of National Development Plan, 2018–21. The report discusses that the need for increased public investment in the Gambia should be balanced against potential fiscal risks related to future Public–Private Partnerships and State-Owned Enterprise

investments. Analysis of public investment patterns shows a fragmented picture, in which external financing dominates. Measures of the efficiency of infrastructure investments show mixed results and considerable room for improvement. The analysis explains that the Gambia's performance across different Public Investment Management Assessment (PIMA) indicators is mixed and does not compare favorably with regional counterparts. Nevertheless, there are many indicators where the PIMA rating is poor. Prevailing weaknesses include the presence of many information gaps and non-transparent disclosure policies. The mission's main recommendations focus on five priority areas and are designed to complement reforms that are already being undertaken.

The massive depression of the 1930's detonated the crisis between harsh reality and the vision of material abundance and economic security created by the American industrial order. Amid widespread poverty there was increasing concentration of economic power and loss of individual initiative. Professor Hawley traces the pattern of this conflict. He analyzes the National Recovery Administration, the sources and nature of the antitrust ideology, the rise of Keynesianism, the confusion within the Roosevelt Administration during the recession of 1937-38, and the government career of Thurman Arnold. Attention is given to the administrators of the New Deal and to the beliefs, pressures, and symbols that affected their policy decisions. How and why these ideas and pressures produced policies that were economically inconsistent yet politically workable is also explained. Originally published in 1966.
