This text examines the use of collaboration technologies in the problem-solving or decision-making process. These systems are widely used in both education and in the workplace to enable virtual groups to discuss and exchange ideas on issues ranging from applied problems to theoretical debate. While some systems are text-based, the majority rely on visualization techniques to allow participants to represent their ideas in a more flexible, graphical form. The text evaluates existing systems, and looks at how the specific needs of users in both educational and corporate environments can be reflected in the design of new systems.

A brief version of Gravetter and Wallnau's proven bestseller, **ESSENTIALS OF STATISTICS FOR THE BEHAVIORAL SCIENCES**, 9th Edition delivers straightforward instruction, unrivaled accuracy, built-in learning aids, and a wealth of real-world examples and illustrations. The authors take time to explain statistical procedures so that students can go beyond memorizing formulas and begin gaining a conceptual understanding of statistics. By skillfully integrating applications that reinforce concepts, they ensure that even students with a weak background in mathematics can fully understand statistics. The text also leads readers to become savvy consumers of information by showing how having an understanding of statistical procedures will help them comprehend published findings. This edition features a new focus on learning objectives, which provide a structure for organizing lectures and preparing assignments and exams. "This book takes a unique approach of utilizing computer simulation methods to introduce students to the key ideas of statistical inference. Methods such as bootstrap intervals and randomization tests are very intuitive to novice students and capitalize on visual learning skills students bring to the classroom. With proper use of computer support, they are accessible at very early stages of a course with little formal background. Our text introduces statistical inference through these resampling and randomization methods, not only because these methods are becoming increasingly important for statisticians in their own right but also because they are outstanding in building students' conceptual understanding of the key ideas"--
