Sebastian Herden präsentiert das Konzept des Model-Driven-Configuration-Managements (MDCM) zur Schließung der identifizierten semantischen Lücke zwischen Unternehmensarchitektur und IT-Konfiguration. Die grundlegende Idee des vorgestellten MDCM-Konzepts zur nahtlosen Integration von Enterprise-Architecture-Management und IT-Konfigurationsmanagement im IT-Betrieb ist es, einen Model-Driven-Engineering-Ansatz zu entwickeln. Das Ziel des MDCM ist neben der Ausrichtung der resultierenden IT-Konfiguration an den Geschäftsprozessen eines Unternehmens und der nachvollziehbaren und transparenten Gestaltung die Unabhängigkeit der Qualität von individuellem Wissen.

This text provides information on core software project management practices. It includes extensive examples and a running, start-to-finish case study. It is aimed at all project managers and software professionals who may manage projects.

Over the last few years, financial statement scandals, cases of fraud and corruption, data protection violations, and other legal violations have led to numerous liability cases, damages claims, and losses of reputation. As a reaction to these

developments, several regulations have been issued: Corporate Governance, the Sarbanes-Oxley Act, IFRS, Basel II and III, Solvency II and BilMoG, to name just a few. In this book, compliance is understood as the process, mapped not only in an internal control system, that is intended to guarantee conformity with legal requirements but also with internal policies and enterprise objectives (in particular, efficiency and profitability). The current literature primarily confines itself to mapping controls in SAP ERP and auditing SAP systems. Maxim Chuprunov not only addresses this subject but extends the aim of internal controls from legal compliance to include efficiency and profitability and then well beyond, because a basic understanding of the processes involved in IT-supported compliance management processes are not delivered along with the software. Starting with the requirements for compliance (Part I), he not only answers compliance-relevant questions in the form of an audit guide for an SAP ERP system and in the form of risks and control descriptions (Part II), but also shows how to automate the compliance management process based on SAP GRC (Part III). He thus addresses the current need for solutions for implementing an integrated GRC system in an organization, especially focusing on the continuous control monitoring topics. Maxim Chuprunov mainly targets compliance experts, auditors, SAP project managers

and consultants responsible for GRC products as
readers for his book. They will find indispensable
information for their daily work from the first to the
last page. In addition, MBA, management
information system students as well as senior
managers like CIOs and CFOs will find a wealth of
valuable information on compliance in the SAP ERP
environment, on GRC in general and its
implementation in particular.

Web Dynpro ABAP, a NetWeaver web application
user interface tool from SAP, enables web
programming connected to SAP Systems. The
authors' main focus was to create a book based on
their own practical experience. Each chapter
includes examples which lead through the content
step-by-step and enable the reader to gradually
explore and grasp the Web Dynpro ABAP process.
The authors explain in particular how to design Web
Dynpro components, the data binding and interface
methods, and the view controller methods. They also
describe the other SAP NetWeaver Elements (ABAP
Dictionary, Authorization) and the integration of the
Web Dynpro Application into the SAP NetWeaver
Portal. The new edition has been expanded to
include chapters on subjects such as POWER Lists;
creating the Modal Windows and External Windows;
using Web Dynpro application parameters and
Shared Objects to communicate between the Web
Dynpro ABAP Application and Business Server

Pages; and creating multi-language mails using Web Dynpro ABAP.

Practical ABAP - Document BuilderA Comprehensive Technical GuideSelva Lakshmanan The purpose of this book is to remove the veil of secrecy surrounding SAP upgrade techniques and concepts, and to provide the user with a detailed description of the steps needed for a successful implementation. Today more than 12 million people in 120 countries who are working for 36,200 companies are using SAP on a regular basis. This popular, but very complex software system must be constantly reconfigured and upgraded to accommodate its latest releases. Upgrading SAP provides a complete overview of the process to upgrade from one SAP release to the next one and explains with detailed descriptions, the use of all relevant SAP upgrade tools. Along with a technical description of the SAP NetWeaver Application Server (AS), it also discusses personnel issues and the economic ramifications of such an upgrade project. Examples in this book are based on various different SAP products and releases, such as SAP NetWeaver 2004, 2004S (also known as NetWeaver 7.0 and 7.1), and SAP Business Suite 2005 with SAP ERP 6.0, BI, CRM, SCM, and SRM. Conceived as both a teaching book and as a reference manual, it covers all the techniques, background information, notes, tips, and tricks needed for any SAP upgrade

project. A CD-ROM accompanies the book with templates and outlines for the upgrading process, as well as third-party SAP-related material.

The power of the IBM System z, combined with the flexibility of Linux on System z, provides the ideal platform on which to implement SAP application servers. System z provides the benefits of continuous availability, high performance, scalability, and ease of management; these qualities support and complement mission-critical SAP business applications. This IBM Redbooks publication focuses on the implementation of SAP application servers on Linux on System z to leverage the synergy of this combination of products. It provides detailed information to guide you through the planning process, including resource sharing considerations, hardware and software requirements, support and maintenance. This book takes you through the steps to prepare the system environment, describing system and network configurations, and

demonstrates the procedures for installing and customizing your system. It describes in detail how to install SAP application servers in z/VM Linux images, including the installation of SAP and Java and hipersockets. Finally, it provides guidance for performance tuning and introduces some useful monitoring tools.
