## Sap Basis Interview

Revised edition of: SAP HANA certification guide / Rudi de Louw. 2016.

In this book, we provide 115 practice certification questions and answers designed to prepare you for taking and passing the application associate consultant certification exam for SAP BusinessObjects Access Control 10.0 (C\_GRCAC\_10) at a single sitting. The book was prepared based on experiences gained via teaching the SAP GRC Access Control 10.0 academy curriculum and numerous project implementations. Aside being useful as a certification preparation resource, it can also be used to prepare for technical interview for the job role of SAP GRC Access Control 10.0 Consultant. The book contains in-depth explanation of concepts covering the areas of common GRC settings, MSMP workflow, Integration Framework, User Provisioning, Role Management, Access Risk Management, Business Rules Framework and Emergency Access Management.

This volume is organized around three areas of SAP--technical installation, troubleshooting, and functional use. Key interview topics include the most important configuration settings to know, SAP tables and transaction codes, certification examination questions, and more.

Learn how to migrate your SAP data to Azure simply and successfully. Key Features Learn why Azure is suitable for business-critical systems Understand how to migrate your SAP infrastructure to Azure Use Lift & shift migration, Lift & migrate, Lift & migrate to HANA, or Lift & transform to S/4HANA Book Description Cloud technologies have now reached a level where even the most critical business systems can run on them. For most organizations SAP is the key business system. If SAP is unavailable for any reason then potentially your business stops. Because of this, it is understandable that you will be concerned whether such a critical system can run in the public cloud. However, the days when you truly ran your IT system on-premises have long since gone. Most organizations have been getting rid of their own data centers and increasingly moving to co-location facilities. In this context the public cloud is nothing more than an additional virtual data center connected to your existing network. There are typically two main reasons why you may consider migrating SAP to Azure: You need to replace the infrastructure that is currently running SAP, or you want to migrate SAP to a new database. Depending on your goal SAP offers different migration paths. You can decide either to migrate the current workload to Azure as-is, or to combine it with changing the database and execute both activities as a
