Astavakragita (The Song of the Self Supreme) contains the Sanskrit text of Astavakragita (both in Nagari and Roman script), its English translation, Exegesis and Glossarial Index. It presents in twenty chapters the substance of Astavakra`s teaching in respect of the Cosmic Self in the form of his dialogue with Janaka, the seer-king of Videha. The teaching is based on the Upanisadic creed of Absolute monism (Advaitavada) that identifies the Self with the non-dual Ultimate Reality. But the contribution of Astavakra is also immense, for he has introduced the element of emotional experience or the mystical feeling as the means for realizing the non-dual nature of the Self. Written in a lucid style and dealing systematically with the subject matter, the book will hold a unique position among the contemplative classics of the world.

And, who knows, you might learn a thing or two about yourself and Reality.The book is also a group of high-powered psychological and philosophical ideas and experiences. Included are many quotations from people on the same journey, and a few funny fillers to give your brain a rest. Your answers and mine are at the end.1. Three

questions2. Deep thinkers and funny fillers3. Our answersTHREE QUESTIONS1. Kant divided Reality into phenomena and noumena. Phenomena are those aspects of Reality accessible to our sense organs processed by our brain. All other aspects of Reality, noumena, are forever closed to humans.The foot feels the foot when it feels the ground.The Buddhals it true that humans can only be aware of the affects of Realty on our nervous system as processed by our brain, never Reality itself? Is it really true that ALL IF MAYA?2. Is objective science the only valid source of information about the nature of Reality, or can subjective experiences also be valid?The arguments back and forth revolve around definitions of "valid", often implicit. Changing the definition automatically changes the answer. How do you define "valid"? Is there one correct definition, or are there many? A Christian would likely consider his experiences in church at least as valid as objective data.3. Is it possible to obtain valid information about Reality without using the five senses?Throughout the long history of humankind there have always been people who believed that they obtained valid information about the nature of Reality using extra-sensory perception. What they brought back from their explorations was often difficult if not impossible to communicate to those who had not had the experience because the explorers had to use words and logic based on the five senses and human brain. They usually fell back on metaphor.Do you believe that extra-sensory perception exists? If so, can it provide valid information about the nature of Reality? Would you like to give the definition of valid another try?

Not illustrated. 1914 edition. Excerpt: ... what he means by "reality," and may be asked how their unreality follows from the supposed reality of his super-sensible world. In answering these questions, he is led to a logic which merges into that of Parmenides and Plato and the idealist tradition. The logic of the idealist tradition has gradually grown very complex and very abstruse, as may be seen from the Bradleian sample considered in our first lecture. If we attempted to deal fully with this logic, we should not have time to reach any other aspect of our subject; we will therefore, while acknowledging that it deserves a long discussion, pass by its central doctrines with only such occasional criticism as may serve to exemplify other topics, and concentrate our attention on such matters as its objections to the continuity of motion and the infinity of space and time--objections which have been fully answered by modern mathematicians in a manner constituting an abiding triumph for the method of logical analysis in philosophy. These objections and the modern answers to them will occupy our fifth, sixth, and seventh lectures. Berkeley's attack, as reinforced by the physiology of the sense-organs and nerves and brain, is very powerful. I think it must be admitted as probable that the immediate objects of sense depend for their existence upon physiological conditions in ourselves, and that, for example, the coloured surfaces which we see cease to exist when we shut our eyes. But it would be a mistake to infer that they are dependent upon mind, not real while we see them, or not the sole basis for our knowledge of the external world. This line of argument will be developed in the present lecture. The discrepancy between the world of physics and the world of sense, which we shall...

How do meaningless marks and sounds become the meaningful words of a natural language? To what do words having referential significance refer? What is the meaning of the words that do not have referential significance? Can ordinary language really do what it appears to do, or is this an illusion? Dr. Adler maintains that these fundamental questions are not satisfactorily treated in the two main philosophies of language that have dominated twentieth-century thinking on the subject - the syntactical and 'ordinary language' approaches. Drawing upon the tradition of Aristotle, Aquinas, Peirce, and Husserl, Dr. Adler's own discussion exemplifies the third approach, which he describes as "semantic and lexical." In this now -classic work, the fruit of more than 50 years' concern with the philosophy of language, Dr. Adler advances a powerful theory of meaning and applies it to some outstanding philosophical problems. In unpretentious and uncluttered prose, he provides a limpid introduction to a number of knotty philosophical issues and at the same time issues a challenge to some of the most tenacious doctrines of the modern world. The philosophy of perception investigates the nature of our sensory experiences and their relation to reality. Raising questions about the conscious character of perceptual experiences, how they enable us to acquire knowledge of the world in which we live, and what exactly it is we are aware of when we hallucinate or dream, the philosophy of perception is a growing area of interest in metaphysics, epistemology, and philosophy of mind. William Fish's *Philosophy of Perception* introduces the subject thematically, setting out the major theories of perception together with their motivations and attendant problems. While providing historical background to debates in the field, this comprehensive overview focuses on recent presentations and defenses of the different theories, and looks beyond visual perception to take into account the role of other senses. Topics covered include: the phenomenal principle perception and hallucination perception and content sense-data, adverbialism and idealism disjunctivism and relationalism intentionalism and combined theories the nature of content veridicality perception and empirical science non-visual perception. With summaries and suggested further reading at the end of each chapter, this is an ideal introduction to the philosophy of perception.
