The approach to motivational interviewing discussed in this book will be useful to student affairs professionals and academic advisors working in a variety of higher education positions. It begins in

Chapter 1 by providing a description and a brief history of MI, noting some of its connections to counseling and social psychology. Chapter 2 explores in more detail the spirit of MI—the key relational components that the professional using MI is attuned to. This interpersonal attitude can be summarized within four key principles: partnership, acceptance, compassion, and evocation. Chapter 3 presents an overview of some contemporary models of academic advising and student affairs practice. Chapter 4 covers the basic MI skill set, which is referred to by the shorthand OARS. Chapter 5 discusses the four processes in MI conversations about change: engaging, focusing, evoking, and planning. Chapter 6 elaborates on the evoking stage and provide an expanded discussion concerning "change talk" and "sustain talk." Change talk refers to student statements that express a desire, need, or readiness to change, while sustain talk refers to student statements that indicate maintenance of the status quo or a reluctance to change. In addition to providing more in-depth definitions of these concepts and examples of student statements, strategies are presented for increasing or evoking change talk and softening sustain talk. In Chapter 7, intermediate to advanced MI skills are addressed to prepare the highly motivated staff member for higher-level training that can be obtained through workshops, observation, and coaching. Chapter 8 puts

everything together in two case examples. Chapter 9 provides some additional exercises that can be used to practice and develop MI basic and intermediate skills. Lastly, some brief concluding remarks are provided in Chapter 10.

DSM-5® Handbook of the Cultural Formulation Interview provides the background, context, and detailed guidance necessary to train clinicians in the use of the Cultural Formulation Interview (CFI), which was created as part of the 2007-2013 DSM revision process. The purpose of the CFI -- and this unique handbook -- is to make it easier for providers to account for the influence of culture in their clinical work to enhance patient-clinician communication and improve outcomes. Cultural psychiatry as a field has evolved enormously from the days when it was principally concerned with epidemiological and clinical studies of disease prevalence; it now examines a multitude of issues, primary among them the differing patient, family, and practitioner models of illness and treatment experiences within and across cultures. The editors, all of whom have been intimately involved in the evolution of the field, have designed the book and accompanying videos for maximum instructional and clinical utility. The Handbook boasts many strengths and useful features, including: A detailed description of each of the three CFI components: a core 16-item questionnaire, which can be applied in any clinical setting with any patient by any mental health clinician; an informant version of the core

CFI used to obtain information from caregivers; and 12 supplementary modules that expand on these basic assessments. This material facilitates implementation of the CFI by clinicians. Over a dozen clinical vignettes are included to illustrate use of the three components, and the Handbook also includes multiple videos that demonstrate the application of portions of the core CFI, and several supplementary modules. Strategies for incorporating the CFI into clinical training are identified and discussed, furthering the objective of developing culturally-sensitive and astute practitioners. The theoretical bases of the CFI are explored, raising questions for discussion and identifying areas for further research. The CFI is a valuable tool for all patients, not just those judged to be culturally different. The CFI has been called the single most practically useful contribution of cultural psychiatry and medical anthropology to clinical psychiatry, primary care, and medicine in general. DSM-5® Handbook on the Cultural Formulation Interview is the only book on the market that equips readers with the skills and insight to incorporate the CFI into practice, making it a critically important addition to the clinical literature.

The lives of people with disabilities are complex and various, and there are many situations where technology – particularly assistive technology – already makes a real difference. It is clear that smart phone and tablet computer based solutions continue to enhance the independence of many users, but it is also important that more traditional assistive technologies and services are not forgotten or neglected. This book presents the proceedings of the 14th conference of the Association for the Advancement of Assistive Technology in Europe (AAATE 2017) entitled: 'Harnessing the power of technology to improve lives', held in Sheffield, UK, in September 2017. This 4-day event about assistive technologies (AT) highlights the association's interest in innovating not only technology, but also services, and addresses the global challenge of meeting the needs of the increasing number of people who could benefit from assistive technology. The 200+ papers in the book are grouped under 30 subject headings, and include contributions on a wide

range of topical subjects, including aging well and dementia; care robotics; eHealth and apps; innovations; universal design; sport; and disordered speech. The breadth of the AAATE conference reflects people's life needs and so the book is sure to contain something of interest to all those whose work involves the design, development and use of assistive technology, whatever the situation. The photo on the front cover illustrates the breadth of assistive technologies that can improve lives. Photographer: Simon Butler.
