Social media have accelerated communication, expanded business horizons and connected millions of individuals who otherwise would never have met. But not everything social media touch turns to gold—much of it is brass. Social networking sites are used by scammers, criminals and sexual predators, and many people now self-diagnose illness based on misinformation shared online. Businesses make great claims about social media as a marketing tool but few show any real returns. We communicate through social media but are we really saying anything? Is social media doomed to be a conduit of narcissism or can it become a channel for responsible communication? Can social networking overcome its manifold violations of privacy? Must we sacrifice our identities in order to tweet or “friend” our associates? This book examines some of the legal and ethical issues surrounding social media, their impact on civil discourse and their role in suicides, murders and criminal enterprise.

national and the supranational level. These principles have arisen from cases involving the protection of fundamental rights. This is the reason why the book explores the topic through the lens of constitutional adjudication, developing an analysis of Courts' argumentation. The volume examines the gradual consolidation of a "constitutional core" of internet law at the supranational level. It addresses the European Court of Human Rights and the Court of Justice of the European Union case law, before going on to explore Constitutional or Supreme Courts' decisions in individual jurisdictions in Europe and the US. The contributions to the volume discuss the possibility of the "constitutionalization" of internet law, calling into question the thesis of the so-called anarchic nature of the internet. Thanks to Facebook and Instagram, our younger selves have been captured and preserved online. But what happens, Kate Eichhorn asks, when we can't leave our most embarrassing moments behind? Rather than a childhood cut short by a loss of innocence, the real crisis of the digital age may be the specter of a childhood that can never be forgotten.

The Basics of Cyber Safety: Computer and Mobile Device Safety Made Easy presents modern tactics on how to secure computer and mobile devices, including what behaviors are safe while surfing, searching, and interacting with others in the virtual world. The book's author, Professor John Sammons, who teaches information security at Marshall University, introduces readers to the basic concepts of protecting their computer, mobile devices, and data during a time that is described as the most connected in history. This timely resource provides useful information for readers who know very little about the basic principles of keeping the devices they are connected to—or themselves—secure while online. In addition, the text discusses, in a non-technical way, the cost of connectedness to your privacy, and what you can do to it, including how to avoid all
