Parks and recreation systems have evolved in remarkable ways over the past two decades. No longer just playgrounds and ballfields, parks and open spaces have become recognized as essential green infrastructure with the potential to contribute to community resiliency and sustainability. To capitalize on this potential, the parks and recreation system planning process must evolve as well. In Parks and Recreation System Planning, David Barth draws on real-world examples to provide a step-by-step approach to creating parks systems that generate greater economic, social, and environmental benefits. Chapters outline each step--evaluating existing systems, implementing a carefully crafted plan, and more--necessary for creating a successful, adaptable system.

Now in its fourth edition, Limitations of Social Research has been revised and updated to take into account new developments in research methodology and applications.

There has been an increase over the past decade in the number of Chinese students studying in western Higher Education Institutions, with figures expected to increase over the next 10 years. However, this has proved particularly challenging for the lecturers in these Institutions regarding how best to engage and teach this particularly unique student group. The Chinese student presents these challenges due to the many cultural and language differences that can be identified, as well as to the western teacher's perception of how these students like to be taught. This book disputes such myths, and provide a useful guide on what those challenges are, offering practical guidance on how to overcome them. The book firstly identifies and defines the Chinese student studying for a degree in western universities and institutions, before going on to examine and explore the cultural differences by discussing issues around teaching and learning. A chapter focusing specifically on language breaks down the differences in detail, with discussions around tonal language and its impact on the student's understanding. Further chapters discuss attitudes to learning, staff support for teaching this particular group, and, finally, some practical suggestions on how best to engage the student and enable them to achieve.

The new edition of this bestselling textbook brings criminological research alive for students. It introduces the processes and practicalities of preparing, doing, experiencing and reflecting upon criminological research. The success of the First Edition has been its ability to contextualize research accessibly within real-life examples of crime, criminology and criminal justice— doing interviews with offenders in prison, undertaking evaluation on crime related projects, using questionnaires to measure fear. Its strength continues to lie in its ability to span the process of doing criminological research, helping students to understand the journey of the researcher.

'This book is refreshing, both as an addition to the general literature and as a text that considers cultural and social issues in studies relating to improving the situation of vulnerable people... [T]his book will be a helpful, accessible and interesting resource for novice and experienced researchers alike in a number of fields' - Nurse Researcher 'Pranee Liamputtong has offered a well organized, clear and accessible work in Researching the Vulnerable...this book can offer very good guidance to the postgraduate student who is willing to focus in qualitative research methods, but also to an experienced researcher who may consider testing out its procedures or eventually is attempting to put into practice innovative qualitative research procedures' - Sociological Research Online Researching Vunerable People takes as its starting point the particular considerations and sensitivities of being a researcher faced with a subject group at the margins of society, and explores the ethical, practical and methodological implications of working with such groups. Pranee Liamputtong is an experienced textbook author, and in this book she attempts to explore qualitative methods using examples, drawn from around the world, from the wide variety of contexts that might count as 'researching the vulnerable'. Numerous salient points for the conduct of research within vulnerable groups of people, including ethical and moral issues, are considered, and discussed in the context of sensitive and innovative research methods.

The third edition of this best-selling text guides students and researchers through the process of doing qualitative research, clearly explaining how different theoretical approaches inform what you do in practice. The text bridges the gap between 'cookbook' and more abstract approaches to qualitative research, by posing 'difficult questions' that researchers should be asking themselves . The book invites researchers to engage in a creative and critical practice in how they draw insights, interpret a range of types of data and craft knowledge from qualitative research. Fully revised and updated, with three new chapters, this edition: · Covers the full research process, with new material on analysing and interpreting data and research ethics · Engages with exciting new developments in the field through challenging qualitative researchers to be creative with how they research and with what they find. · Examines the potential of qualitatively-led approaches to mixed methods, and their implications for research design, research practice and the production of convincing arguments. A theoretically engaged, grounded approach to qualitative researching, this remains the ideal text to guide students to become thoughtful, creative and effective qualitative researchers.

This new handbook is about the practices of conducting research on military issues. As an edited collection, it brings together an extensive group of authors from a range of disciplinary perspectives whose chapters engage with the conceptual, practical and political questions raised when doing military research. The book considers a wide range of questions around research about, on and with military organisations, personnel and activities, from diverse starting-points across the social sciences, arts and humanities. Each chapter in this volume: Describes the nature of the military research topic under scrutiny and explains what research practices were undertaken and why. Discusses the author's research activities, addressing the nature of their engagement with their subjects and explaining how the method or approach under scrutiny was distinctive because of the military context or subject of the research. Reflects on the author's research experiences, and the specific, often unique, negotiations with the politics and practices of military institutions and military personnel before, during and after their research fieldwork. The book provides a focussed overview of methodological approaches to critical studies of military personnel and institutions, and processes and practices of militarisation and militarism. In particular, it engages with the growth in qualitative approaches to military research, particularly research carried out on military topics outside military research institutions. The handbook provides the reader with a comprehensive guide to how critical military research is being undertaken by social scientists and humanities scholars today, and sets out suggestions for future approaches to military research. This book will be of much interest to students of military studies, war and conflict studies, and research methods in general.

Disembodied research erects false dichotomies between flesh and reason, and between the corporeal and the social. By contrast, Torkild Thanem and David Knights engage with approaches and practices that exploit the body's capacity to generate knowledge, craft lively accounts, and create fleshy concepts. These approaches enrich our understanding of how people live, work, and interact with their bodies within the social world. Thanem and Knights discuss methods, practices, and personal experiences which involve bodies in the research process – in generating and analysing empirical material, reflecting on the work they do as researchers, and turning research into written text. Embodied Research Methods is an important and practical resource for undergraduate and postgraduate students across the social sciences, and a thought-provoking read for researchers in these areas.
