This textbook discusses central statistical concepts and their use in business and economics. To endure the hardship of abstract statistical thinking, business and economics students need to see interesting applications at an early stage. Accordingly, the book predominantly focuses on exercises, several of which draw on simple applications of non-linear theory. The main body presents central ideas in a simple, straightforward manner; the exposition is concise, without sacrificing rigor. The book bridges the gap between theory and applications, with most exercises formulated in an economic context. Its simplicity of style makes the book suitable for students at any level, and every chapter starts out with simple problems. Several exercises, however, are more challenging, as they are devoted to the discussion of non-trivial economic problems where statistics plays a central part.

This best-selling introduction stresses the development of statistical thinking – the assessment of credibility and value of the inferences made from data – by both those who consume and those who produce the information. The authors emphasize inference; data collection and analysis are covered extensively, as needed, to evaluate the reported results of statistical studies and to make good business decisions. Numerous case studies, examples, and exercises draw on real business situations and recent economic events. Assumes a background in basic algebra.

Essentials of Business Statistics presents basic statistic concepts, including descriptive statistics, probability, and elementary inferential statistics in a student oriented style. All concepts are developed with support of unique three part examples: problem, solution, and interpretation, which give students the full picture. Applications are drawn from all areas of business and economics. This book is a refocused and shortened version of APPLIED STATISTICS FOR BUSINESS AND ECONOMICS 2/e by Webster. This briefer book concentrates on the core topics in business statistics. It is important to retain 2/e Webster users by presenting this 1/e as a "shortened" book. It is also very important to present it as a "new" alternative to the Mason level market, to replace any brief text, e.g. Mason, Levin/Rubin, Mann, Trioloa/Franklin and Anderson/Sweeney/Williams Essentials.

This title enables students to conduct serious analysis of applied problems rather than running simple 'canned' applications. The text is at a mathematically higher level than most business statistics texts and provides students with the knowledge they need to become stronger analysts for future managerial positions.
