This volume provides an overview of communication study, offering theoretical coverage of the broad scope of communication study as well as integrating theory with research. To explicate the integration process, the chapter contributors -- experts in their respective areas -- offer samples in the form of hypothetical studies, published studies, or unpublished research, showing how theory and research are integrated in their particular fields. The book will appeal to graduate students and faculty members who want a thorough overview of not only the field, but also sample research stemming from its various component parts.

Thinkers50 Management Thinker of 2015 Whitney Johnson wants you to consider this simple, yet powerful, idea: disruptive companies and ideas upend markets by doing something truly different--they see a need, an empty space waiting to be filled, and they dare to create something for which a market may not yet exist. As president and cofounder of Rose Park Advisors' Disruptive Innovation Fund with Clayton Christensen, Johnson used the theory of disruptive innovation to invest in publicly traded stocks and private early-stage companies. In *Disrupt Yourself*, she helps you understand how the frameworks of disruptive innovation can apply to your particular path, whether you are: a self-starter ready to make a disruptive pivot in your business a high-potential individual charting your career trajectory a manager looking to instill innovative thinking amongst

This book presents and elaborates on the rationale and implications of the transformational dimension of psychoanalysis. In so doing, it attempts to extend psychoanalytic theory and practice beyond neurosis and beyond what were formerly thought to be the limits of analytic understanding. Its theoretical vision sits at the crossroads of the thinking of Freud, Bion, Winnicott, Green and the Paris Psycho-Somatic School. Other sources include the contributions of contemporary French psychoanalysts such as Laplanche, Donnet, L. Kahn, P. Miller and the Botellas, along with the work of Alvarez, Scarfone, Ferro, Ogden, and more. In re-examining the very epistemological foundations of psychoanalysis and their implications for a theory of psychic functioning, it follows upon and extends the radical implications

An ID Book Club Selection • Featured in the Peacock original documentary series Epstein's Shadow: Ghislaine Maxwell By now, the basic contours of Jeffrey Epstein's horrendous crimes—his decades-long serial abuse of young women and underage girls—are familiar. But for all that has been written about Epstein since his shocking death in a lower Manhattan jail cell, an astonishing amount remains unknown. In *The Spider*, Barry Levine shines a light into the darkest corners of Epstein's world, including • Epstein's young adulthood and earliest accusations of sexual misconduct • the murky sources of Epstein's fortune and business dealings • Epstein's circle of

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives.
