This book presents economics as a serious, lively, and evolving science. Its goal is to help the student to develop the "economic way of thinking" and to gain insights into how the economy works and how it might be made to work better. New ideas, such as dynamic comparative advantage, game theory, the modern theory of the firm, and public choice theory, are explained with familiar core ideas and tools. Parkin's goal is to make economics as accessible as possible yet to provide a thorough and complete coverage of the subject, not a slimmed-down or over-simplified selection. With the still unmatched combination of text and technology products provided by the Fifth Edition, Parkin reaches a notably wide range of students and is a recognized leader in the principles of microeconomic course.

In this book, John P. Burkett presents microeconomics as an evolving science, interacting with mathematics, psychology, and other disciplines and offering solutions to a growing range of practical problems. The book shows how early contributors such as Xenophon, Ibn Khaldun, and David Hume posed the normative and positive questions central to microeconomics. It expounds constrained optimization techniques, as developed by economists and mathematicians from Daniel Bernoulli to Leonid Kantorovich, emphasizing their value in deriving norms of rational behavior and testable hypotheses about typical behavior. Applying these techniques, the book introduces partial equilibrium analysis of particular markets and general equilibrium analysis of market economies. The book both explains how laboratory and field experiments are used in testing economic hypotheses and provides materials for classroom experiments. It gives extensive and innovative coverage of recent findings in cognitive psychology and behavioral economics, which not only document behavior inconsistent with some traditional theories, but also advance positive theories with superior predictive power.

This book offers a comprehensive overview of current, innovative approaches to assessing generic and domain-specific learning outcomes in higher education at both national and international levels. The authors highlight key conceptual and methodological challenges connected with intra-national and cross-national assessment of learning outcomes in higher education; introduce novel approaches to improving assessment, evaluation, testing, and measurement practices; and offer exemplary implementation frameworks. Further, they examine the results of and lessons learned from various recent, world-renowned research programs and feasibility studies, and present results from their own studies to provide new insights into how to draw valid conclusions about learning outcomes achieved in various contexts.
