With a Foreword writer Steven Weinberg In this richly illustrated book, Nobel Laureate Gerard 't Hooft and Theoretical Physicist Stefan Vandoren describe the enormous diversity of natural phenomena that take place at different time scales. In the tradition of the bestseller Powers of Ten, the authors zoom in and out in time, each step with a factor of ten. Starting from one second, time scales are enlarged until processes are reached that take much longer than the age of the universe. After the largest possible eternities, the reader is treated to the shortest and fastest phenomena known. Then the authors increase with powers of ten, until again the second is reached at the end of the book. At each time scale, interesting natural phenomena occur, spread over all scientific disciplines: orbital and rotation periods of planets and stars, decay times of elementary particles and atoms, biological rhythms and evolution processes, but also the different geological time scales. somewhat facetious narrating style and the abundance of illustrations are so inviting and rather addictive once you picked up the book.” European Mathematical Society “Pleasingly accessible volume that will give pleasure to academics, students, connoisseurs of coffee-table books and even the people who compile questions for Trivial Pursuit ... Can be enjoyed as a source of scientific stories and images, as an unusual perspective on history, as a popular account of modern physics, and so on. Underneath them all is a wealth of serious science that will give readers insights into abstract fundamental ideas via concrete realities ... Every science teacher would benefit from reading Time in Powers of Ten, but I hope it will have an even wider reach.” Times Higher Education “The authors have compiled a refreshing mix of historical anecdotes and examples from music to sport and biology to astronomy to lighten up the heavier taste of particle physics and cosmology... It is both an enjoyable read and very pleasant to browse at leisure... It fully conveys the authors' amazement at — as Feynman put it — our fantastically marvellous universe.” Nature Physics “The authors introduce the reader to the diversity of nature in a novel way by describing typical and interesting phenomena that occur or have occurred on many different time scales. The time scales considered differ by powers of ten, as the title of the book says, from the shortest times of which we have knowledge to the longest. I am sure many readers will enjoy the book as I have.” Edward Witten, Fields Medalist “Time is an essential dimension of life. Indeed, its remarkable and awesome variation of scale shapes the natural world. This book by Gerard 't Hooft and Stefan Vandoren gives us an exposé of a wide range of natural phenomena and their associated time scales, spanning the very small, the very large, and the life events of our universe. The book is elegantly illustrated and should be an enjoyable read for anyone interested in a deeper understanding of the fourth dimension, time, and how it shapes our lives.” Ahmed Zewail, Nobel Laureate in Chemistry “Like the original Powers of Ten, it is a wonderful book for flipping through and thinking about puzzles and is a good introduction to basics like how to tell a quark from a lepton.” The Dispatch “The book reveals the extraordinary complexity of our universe — it is a fascinating journey.” CERN Courier “This is a fascinating coffee-table book ranging from the unimaginably huge to the unimaginably tiny.” Ultramicroscopy “You can read the book in any direction. Delving into the index takes you on a mystery tour of the time domain. Helpfully, all the major phenomena are gathered together on an illustrated time line. This book is definitely one for your reading list.” Physics Education

Between December 1943 and August 1944, Franklin Delano Roosevelt and Winston Churchill ignited the Cold War, a superpower rivalry that would dominate the world over half a century, by building an atomic bomb and excluding their Russian allies. Peter Watson tells the pulse-pounding story of how two atomic physicists tried to counter this in two very different ways. While Niels Bohr sought to convince President Roosevelt and Prime Minister Churchill to share their nuclear knowledge with Joseph Stalin, nuclear scientist Klaus Fuchs, a German Communist emigre to Britain, was leaking atomic secrets to the Soviets in a rival attempt to ensure parity between the superpowers. Neither succeeded in preventing the World War II allies from unleashing the atom bomb on the world. Fallout proves that the atomic bomb was not needed, and was made as a result of a series of flawed decisions. The Americans did not tell the UK that the atomic research was compromised by Soviet spies; the British did not tell the Americans that in 1943 they knew for sure that Germany did not have a nuclear bomb program. Neither country admitted to the scientists developing the bomb that it

would never be used to counter the (non-existent) German nuclear threat. Had the scientists known, many of them would have refused to complete work on the bomb. This story shows how politicians fatally failed to understand the nature of atomic science and, in so doing, exposed the world needlessly to great danger, a danger that is still very much with us. This intermediate level text has been developed in accordance with performance-based principles, contextualization, use of authentic materials, function/task-orientedness, and balance between skill getting and skill using. Each topic covers punctuation, grammar and new words and expressions.

Modern Korean breaks new ground in the field of Korean studies by providing students with a skillfully constructed text for intermediate-level Korean-language study. The text emphasizes the development of reading proficiency, but its exercises, which employ a communicative approach emphasizing student-student and student-teacher interactions in real-life scenarios, reinforce skills learned through conversation practice. Its twenty-four lessons are divided into two groups of twelve lessons each. A single lesson consists of a main text, written in expository or descriptive prose that often incorporates a conversational style; a dialogue; a discussion of new word usage and structural patterns; substitution and grammar drills; exercises; and a vocabulary list. Lessons in the second half of the book introduce Chinese characters. Along with improving their language skills, students will gain from this volume the means to better understand Korean society and culture. Among the text topics covered are Korean history, geography, holidays, literature, customs, and people. Used either for classroom instruction or for self-study, Modern Korean guides the student through a critical transition in the learning process, from the ability to carry on a conversation to the acquisition of intermediate skills needed to read the written language.
