Hijacking the Brain provides the first-ever scientific explanation for the success of Twelve-Step programs. well as for the relative success of Twelve-Step Programs of recovery. Addiction is recognized by experts as an organic brain disease, and most experts promote Twelve-Step programs (AA, NA, CA, etc.) which invoke a 'spiritual solution' for recovery. To date, no one has described "why" these programs work. 'Hijack' tells us why. In 'Hijack,' the role of 'working The Steps' for reducing stress and becoming emotionally centered is discussed in depth. A full chapter is devoted to the rewarding and comforting physiology of meditation and the spiritual experience. The author uses examples from animal sociobiology, as well as sophisticated human brain-imaging studies, to demonstrate that empathic socialization and altruism are instinctive and 'naturally rewarding' and, along with Step Work, act as a substitute for the 'synthetic rewards' of drugs of abuse. 'Hijack' does not challenge the Steps or the Traditions of Twelve-Step programs. The sole intention of Hijacking the Brain is to 'connect the dots' between an 'organic brain disease' and a 'spiritual solution' with sound physical, scientific evidence. Avoiding strict scientific language as much as possible, 'Hijack' is written for the layperson and abundantly illustrated.

From the President of the Research Society on Alcoholism On behalf of the Research Society on Alcoholism, I am pleased to introduce this thirteenth volume of Recent Developments in Alcoholism about alcohol and violence. Current concepts are presented in well-organized sections that focus on epidemiology, neurobiology, psychology, and family issues. It is becoming increasingly clear that age, gender, socioeconomic circumstances, and genetics affect aggressive behavior and vulnerability to alcoholism. This volume contains up-to-date discussions of these issues. Indeed, the information presented here will help all alcohol researchers to identify biological and social factors that contribute to the comorbidity of alcoholism and aggression. The editors and associate editors should be congratulated for bringing together such important information. This volume will be a valuable resource for investigators and therapists alike. Ivan Diamond M. D. , Ph. D. President, Research Society on Alcoholism From the President of the American Society of Addiction Medicine The American Society of Addiction Medicine is honored to continue its sponsorship with the Research Society on Alcoholism of Recent Developments in Alcoholism. The topic of alcohol and violence is a particularly timely one, given the growing number of studies that are examining the relationship between the two. These studies are consistent with the hypothesis that alcohol can increase aggression and contribute to both domestic and criminal violence. Intoxicating blood levels of alcohol have been found to be especially prevalent in those injured in fights and assaults.
