'The Editing of Star Wars: How Cutting Created a Classic' is a close reading of the editing in the 1977 film 'Star Wars: A New Hope', written by Linton Davies. It's based around the idea that editing decisions are not made in the abstract, but within the context of the rest of the film, and an analysis of them should work the same way. Star Wars is without doubt one of the most beloved works in the history of cinema, and certainly one of the most discussed. The mass of secondary material, from behind-the-scenes documentaries to cast & crew interviews, makes it a perfect candidate for an analysis that's about what's left out as much as what stayed in. Whether you're an editor, a Star Wars fan or just someone interested in learning more about what really makes films tick, this short, educational book will help you look at the art of filmmaking in a new way.

While previous work on the Star Wars universe charts the Campbellian mythic arcs, political representations, and fan reactions associated with the films, this volume takes a transmedial approach to the material, recognizing that Star Wars TV projects interact with and relate to other Star Wars texts. The chapters in this volume take as a basic premise that the televisual entrants into the Star Wars transmedia storyworld are both important texts in the history of popular culture and also key to understanding how the Star Wars franchise—and, thus, industry-wide transmedia storytelling strategies—developed. The book expands
