Project Report from the year 2014 in the subject Economics - Finance, grade: A-, course: Advance research methodology, language: English, abstract: The decisions relating to the capital structure have been one of the most important decisions that have to be taken by the financial managers in any organization. The cement sector of Pakistan plays a vital role in economic development. Hence the importance of decisions pertaining to its capital structure can't be denied. This study investigates the effect of profitability, tangibility, size and liquidity on capital structure decisions of the listed companies in Karachi stock exchange of cement sector in Pakistan. This research study provides the information that would help the management of cement industry to make better decisions related to the capital structure. It provides a deep insight of an optimal capital structure for the cement industry. Which will then support in maximization of the share value of firms on the one side and the minimization of cost of capital on the other side, and overall it would have a significant effect on the firm's profitability which is the main objective of any organization. The variables include leverage, profitability, liquidity, Size, and tangibility.

Master's Thesis from the year 2015 in the subject Business economics - Operations Research, University of Lahore (Lahore Business School), language: English, abstract: This research/study has been conducted on the capital structure of the cement industry Pakistan taking the sample of 11 companies out of the population of 24 companies registered on the Karachi stock exchange of the period 2001 to 2015. This study used the least square method to find out the relationship of dependent and independent variables. It has taken leverage as a dependent variable and firm size, growth, liquidity, tangibility, non debt tax shield, and profitability as independent variables, while the 3 independent variables have not supported the assumption (riddance test) of linear regression model, which is profitability liquidity and growth, thus its carry out the research on the remaining 4 variables which is dependent variable leverage and independent variables non debt tax shield, tangibility and firm size. The outcome of the research is demonstrated after analyzing that there is negative relationship in between the firm size and Non debt tax shield with leverage, while there is positive relationship in between the tangibility and leverage. So after analyzing it has been determined the main determinates of capital structure of the cement industry is tangibility of asset. This is a comprehensive research study which will measure the prospects and

problems of cement industry of Pakistan. This study is needed to gauge the standard of manufacturing the cement in Pakistan. Thus a comprehensive research was conducted using both qualitative and quantitative research instruments to ensure accuracy, the responses from the participants was positive and the results from the analyses fulfilled the objective of the study.

The objective of the research study is to evaluate the contribution of cement industry in the economic development of Pakistan. The study is basically a historical research and it covers all the developments made in the cement industry of Pakistan since its inception. The study reveals the importance of the cement sector for any economy by highlighting the major contributions of the industry in the economic development of Pakistan. The contribution of economic development of cement industry in the economic development is measured by the value addition of cement sector to Gross Domestic Product (GDP), employment opportunities created by the sector, receipts from exports, taxes paid to government and all revenues generated by the industry. The study reveals that the cement industry plays a key role in the economic development of Pakistan. The contribution of cement industry is very positive for not only the manufacturing sector but also for the overall economic development of Pakistan. The cement industry of Pakistan used to be a very tiny industry but it grew with the passage of time and ultimately it entered in the global market. The industry contributes in the Gross Domestic Product (GDP), it creates employment opportunities for thousands of people and it creates huge revenue for the government in the form of taxes.
