This textbook was inspired from a blended learning course developed for Lean Six Sigma Green Belt Certification on Forge Progress by Joseph Studios. In researching and developing the course, other texts were used as reference. Most Lean Six Sigma texts are just plain painful to read. Out of consideration for all students taking a Lean Six Sigma course, this is a comprehensive and corresponding workbook. This workbook is a place for the student to take notes, complete activities, and reference the information in a manner easy to understand. After the initial pilot of our course, we circled back to the workbook and thought of how great it would be if people could really sink their teeth into Lean Six Sigma. Our mission was to make their reading material easier to read with examples that could be understood regardless of a student's profession. This book is the product of this initiative approach to teaching. We created this body of knowledge to take someone with zero knowledge of the concepts of Lean Six Sigma and bring them to a level where they could confidently pass a Lean Six Sigma Green Belt exam. Our goal for the readers is to get them ready to certify as a Lean Six Sigma Green Belt. Whether it be as a student or independent reader, this book will be a key part of your preparation for certification. This book includes an introduction to tools and techniques that you may not have encountered yet in practice.

This book is written for the Six Sigma Black Belt who needs an understanding of many statistical methods but does not use all of these methods every day. It is intended to be used as a quick reference, providing basic details, step-by-step instructions, and Minitab statistical software instructions. Six Sigma Black Belts typically use a statistical program such as Minitab to perform calculations, but an understanding of the underlying statistics is still needed. Anybody can type data into a program; a Black Belt must be capable of understanding which hypothesis test is appropriate for a

given use, as well as the assumptions that must be met to correctly perform the hypothesis test. The methods presented here are laid out according to the Six Sigma DMAIC (Define, Measure, Analyze, Improve, Control) phases in which they are typically used. However, these methods can also be applied outside of a Six Sigma project, such as when one simply needs to determine whether there is a difference in the means of two processes producing the same parts. A Six Sigma Black Belt using Statistics for Six Sigma Black Belts will be able to quickly zero in on appropriate methods and follow the examples to reach the correct statistical conclusions.
