This book provides an excellent illustration of the interrelationship between progress in scientific methodology and conceptual advances, and its publication should contribute to further advances. It is well known that major advances in understanding often follow the development of new methods. The development of the acetylene reduction assay for nitrogenase activity provides a good example of this interrelationship between theory and methods. Theoretical knowledge led to a search for substrates for nitrogenase that could be

assayed for more easily than ammonium, the normal product of the enzyme. The discovery of the reduction of acetylene to ethylene by nitrogenase provided the ideal answer to the problem by providing a rapid, specific, nondestructive, and inexpensive assay for nitrogenase activity. This assay is now used by almost every laboratory doing research on nitrogen fixation.

However, further use and development of the acetylene reduction assay has shown that it can underestimate nitrogenase activity and can even give incorrect relative values under some circumstances. The major problem is that exposure of legume nodules to acetylene can cause a large increase in the resistance to oxygen diffusion into the nodule. This reduced supply of oxygen decreases the rate of nitrogenase activity within a few minutes.

Do you think the safety of surfing the Internet is a serious thing but you would like to better understand how to improve it? **THE PROBLEM.** While browsing online, I often had the feeling of being observed, that there was someone who knew what interested me, what I was looking for on the web. I remember one day I was looking for a Stan Smith pair that I liked, to compare prices, and finally turned off the computer without buying anything. The same evening I turned on the PC to visit a blog and here ... a banner appears with the advertisement of a pair of shoes. So I asked myself: is it a coincidence? No it was not. Giants of the web such as Google, Facebook and many others track the habits and interests of their users to profile them and sell this information to advertising agencies, drawing up a profile of our person. **WHAT WE CAN DO.** This book is the result of my personal experience and contains several tricks for safe surfing, providing understandable details on how our online activities can be tracked by third parties and how this can be avoided. Inside, you'll find: Why we should worry about our privacy What are the methods used by IT companies to track users How we can protect ourselves from tracking What we mean when we talk about DeepWeb and DarkNet How we can secure local data ? If you care about your privacy, your identity, and you want to protect it, this book is probably for you.
