The Bible does not say Mary Magdalene was a prostitute, but some people today still believe that. What the Bible does tell about Mary Magdalene, however, is heavily slanted toward the culture with women considered inferior and men totally dominating their lives. Attempting to write the part of Mary's story not told in the Bible, I still found clues in the Bible as to what is missing. I believe the major clue is Jesus himself. Jesus had not discriminated against women. Even though the discrimination would continue in the next two thousand years, gender equality emerged in the twentieth century and my lifetime. Through personal experience and women's history, I found reasons for it lasting so long, and you cannot address discrimination without touching on all forms of prejudice because they are basically the same thing. You will realize women's rights may not be permanent and women's diligence is still required today, as well as the protection of women's rights in future generations.

This book questions if spherology is a philosophy for designers, giving guidance on ways to read Spheres, how to approach the trilogy's indexicality, and apply the key tropes and ethics of atmospheres to digital design. Each chapter includes a design-in, that is a practical entry point into the many tropes of Spheres including— bubbles, globes and foam. The book also applies spherology to an atmosphere design issue involving endangered species and geospatial threats to the environment. Spherology refers to the Spheres trilogy by the philosopher Peter Sloterdijk, which traces spherical

A Hidden Legacy reveals previously unknown insights into the remarkable contributions Esther Zimmer Lederberg made to molecular biology and takes readers through her instrumental role in the discovery of bacterial genetics.

In this book, leading gender scholars survey the contribution of feminist scholarship to new norms and knowledge in diverse areas of political science and related political practice. They provide new evidence of the breadth of this contribution and its policy impact. Rather than offering another account of the problem of gender inequality in the discipline, the book focuses on the positive contribution of gender innovation. It highlights in a systematic and in-depth way how gender innovation has contributed to sharpening the conceptual tools available in different subfields, including international relations and public policy. At the same time, the authors show the limits of impact in core areas of an increasingly pluralised discipline. This volume will appeal to scholars and students of political science and international relations.

Offers a comprehensive perspective on knowledge production in the field of sociology.

Moreover, it is a tribute to the scope of Merton's work and the influence Merton has had on the work and life of sociologists around the world. This is reflected in each of the 12 chapters by internationally acclaimed scholars witnessing the range of fields Merton has contributed to as well as the personal impact he has had on sociologists. This approach is in itself a tribute to Merton: an analysis of knowledge production through a contextualized review of an author's life-work – a quintessentially "Mertonian" enterprise.

Though Susan B. Anthony and Elizabeth Cady Stanton are well-known historical names, that of Matilda Joslyn Gage usually evokes the response, "Who?" Yet, this amazing woman

contributed equally for many years as part of a triumvirate with Anthony and Stanton. Matilda was involved in the women's movement from 1852 until her death in 1898. She became a noted speaker and writer on women's suffrage. She was born in Upstate New York to an abolitionist family. Indeed, her childhood home and her later long-time Greek Revival home (now a museum dedicated to her) in Fayetteville, New York, were both stops on the Underground Railroad. She was best known for her feminist and suffragist activities but was written out of history because she was considered by her peers to be too radical in all she proposed to accomplish. Inspired by the Haudenosaunee women who were her neighbors and who adopted her into their Mohawk wolf clan, she was determined to gain the rights of property ownership, governance, and equality of power for her 19th-century sisterhood. She had a life-long desire for justice and equality for all and was connected to the ideas of Theosophy and Unitarianism. This moved her to take on the inequality of women in religious institutions, which her contemporaries seemed too radical. Her book, *Woman, Church and State*, was deemed as "going too far by many. She championed women inventors and "The Matilda Effect" became her legacy. She was also the inspiration for her son-in-law L. Frank Baum's 14 Oz books. You will find her immensely quotable!

????:Social stratification in science

Science changes the world because the creation of knowledge opens up new pathways for us to explore new ways of doing things, and new questions to ask. My optimism lies in the fact that I think that the answer to why science is sexist does all of these things. In this eye-opening BWB Text, Nicola Gaston, President

of the New Zealand Association of Scientists, reveals the ways in which the discipline of science is sexist. From the under-representation of women to the argument that mental capabilities are gendered, Gaston demonstrates the extent of our unconscious bias against female scientists, and warns of its damaging consequences for science and for society. In asking what can be done to combat this bias, she calls for us to rethink not just our attitudes towards gender, but also towards scientific knowledge and inquiry.

White Cargo is the forgotten story of the thousands of Britons who lived and died in bondage in Britain’s American colonies. In the seventeenth and eighteenth centuries, more than 300,000 white people were shipped to America as slaves. Urchins were swept up from London’s streets to labor in the tobacco fields, where life expectancy was no more than two years. Brothels were raided to provide “breeders” for Virginia. Hopeful migrants were duped into signing as indentured servants, unaware they would become personal property who could

be bought, sold, and even gambled away. Transported convicts were paraded for sale like livestock. Drawing on letters crying for help, diaries, and court and government archives, Don Jordan and Michael Walsh demonstrate that the brutalities usually associated with black slavery alone were perpetrated on whites throughout British rule. The trade ended with American independence, but the British still tried to sell convicts in their former colonies, which prompted one of the most audacious plots in Anglo-American history. This is a saga of exploration and cruelty spanning 170 years that has been submerged under the overwhelming memory of black slavery. *White Cargo* brings the brutal, uncomfortable story to the surface.

This book highlights cutting-edge research in the field of network science, offering scientists, researchers, students and practitioners a unique update on the latest advances in theory and a multitude of applications. It presents the peer-reviewed proceedings of the IX International Conference on Complex Networks and their Applications (COMPLEX NETWORKS 2020). The carefully selected papers cover a wide range of theoretical topics such as network models and measures; community structure, network dynamics; diffusion, epidemics and spreading processes; resilience and control as well as all the main network

applications, including social and political networks; networks in finance and economics; biological and neuroscience networks and technological networks. Matilda loves science and inventing. Her heroes are Marie Curie, Leonardo da Vinci and Thomas Edison, and one day she wants to be a famous inventor herself. So when she doesn't win the school science fair, she's devastated - especially as the judges didn't believe she'd come up with her entry on her own. Because she's a girl. When Matilda shares her woes with her Grandma Joss, she's astonished to learn her grandma was once a scientist herself - an astrophysicist, who discovered her very own planet. Trouble is, Grandma Joss was also overlooked - her boss, Professor Smocks, stole her discovery for himself. And he's about to be presented with a Nobel Prize. Matilda concocts a plan. They'll crash the award ceremony and tell everyone the truth! So begins a race against time - and against Matilda's strict mum and dad! - on a journey through Paris, Hamburg and Stockholm, and on which they encounter a famous film star, a circus, and a wanted diamond thief...

Each of five children lucky enough to discover an entry ticket into Mr. Willy Wonka's mysterious chocolate factory takes advantage of the situation in his own way.
